ORDINANCE NO. 035-13
Series of 2013

**AN ORDINANCE APPROVING THE 2013-2016 DISASTER
RISK REDUCTION AND MANAGEMENT PLAN PREPARED
BY THE DAVAO CITY RISK REDUCTION AND
MANAGEMENT COUNCIL**

Be it ordained by the Sangguniang Panlungsod of Davao City in session assembled that:

SECTION 1. TITLE - This Ordinance shall be known as "AN ORDINANCE APPROVING THE 2013-2016 DISASTER RISK REDUCTION AND MANAGEMENT PLAN PREPARED BY THE DAVAO CITY RISK REDUCTION AND MANAGEMENT COUNCIL";

SECTION 2. DECLARATION OF POLICY – Section 2, paragraph (d) of Republic Act No. 10121 provides, to wit:

(d) Adopt a disaster risk reduction and management approach that is holistic, comprehensive, integrated, and proactive in lessening the socioeconomic and environmental impacts of disasters including climate change, and promote the involvement and participation of all sectors and all stakeholders concerned, at all levels, especially the local community;

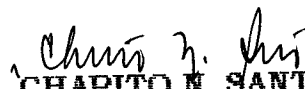

SECTION 3. APPROVAL – The Davao City Disaster Risk Reduction and Management Plan covering the period 2013-2016 prepared by the Davao City Risk Reduction and Management Office shall be approved for the purpose of developing an all hazards planning approach that will be used for all threats to, and/or emergencies or disasters and funding identified projects proposed by various concerned departments to establish responsiveness of the City Government to lessen the impact of disasters in Davao City;

SECTION 4. SEPARABILITY CLAUSE – If for any reason, any section or provision of this Ordinance shall be declared unconstitutional or invalid, no other section or provision shall be affected thereby;

SECTION 5. EFFECTIVITY CLAUSE – This Ordinance shall take effect immediately upon approval;

ENACTED, September 24, 2013, by a majority vote of all the Members of the Sanggunian present.

Executive Summary

Davao City is a highly urbanized City in Mindanao. It is the largest city in the world in terms of land area. The city has eight (8) watersheds and six(6) river systems. Bounded by different provinces, it is one of the most livable Cities in the World.

With all its distinctions, the City has not been exempted from both natural and human-induced disasters, as it has experienced in the past. Despite all these experiences the City was able to provide the needed intervention to restore the communities that were victims of hapless disasters that destroy both lives and properties of the people.

Development Policies and Initiatives

The passage of the City's Comprehensive Land-Used Plan (CLUP) has provide a new dimension in terms of relocating people in areas that are far from the existing hazards in the City. These development policies will ensure that future developments will now be located away from the hazards.

Likewise, environmental policies enacted by the legislative body of the City, once again proves that the City is serious in protecting the remaining natural assets that could be the City's obligation to the next generations.

Building Back Better Principle

The building back better principle is geared towards a sustainable development in the City that would provide safer and more resilient infrastructures that could withstand disasters. This principle will provide more adaptive communities and sustainable development.

Disaster Risk Reduction and Management Plan

It is on this aspect that the City shall be responsible in crafting the Davao City Disaster Risk Reduction and Management Plan to answer the growing needs of formulating and aligning the thrust of the Local Government in addressing the DRR programs and projects of the City. This plan will ultimately be the basis for providing for a livable City for all.

Thematic Area 1. Disaster Prevention and Mitigation

Disaster Prevention and Mitigation provides key strategic actions to activities revolving around hazards assessment and mitigation, vulnerability analysis, identification of hazard-prone areas and mainstreaming DRRM into development plans. It underscores the need for sound and scientific analysis of the different underlying vulnerability factors, risks and exposure to hazards and disasters.

Thematic Area 2. Disaster Preparedness

Disaster Preparedness provides for key strategic actions that give importance to community awareness and understanding, contingency planning, conduct of local drills, and the development of a Barangay Disaster Response Plan. In preparing communities and governments for possible disasters, predetermined needs based on information available are crucial. Risk-related information coming from the Prevention and Mitigation aspect is necessary in order for preparedness activities to be responsive to the needs of the people and situation on the ground. Also, policies, budget and institutional mechanisms established under the Disaster Prevention and Mitigation aspect will be further enhanced through capacity building activities, development of coordination mechanisms, among others. Through these, coordination, complementation and interoperability of work in DRRM operations and essential services will be ensured.

It should be noted that the activities in this thematic area are not linear but cyclical and anticipate improvements over time. Behavioral change created by the Preparedness aspect is eventually measured by how well people respond to disasters. At the frontlines of disaster preparedness are local government units and communities. Overall, the bottom line is having more prepared citizenry and governments.

Thematic Area 3. Disaster Response

Disaster Response provides for key actions that give importance to activities during the actual disaster response operations such as needs assessment, search and rescue, relief operations, and early recovery activities. The activities identified below will be done either before the actual response operations or during the disaster event. For those activities which need to be completed prior to actual response operations, they will be linked to activities earlier identified in the preparedness aspect. However, to ensure that the proper response "lens" is issued in doing the said activities, they have been included in this aspect. Overall, the success and realization of this priority area rely heavily on the completion of the activities under both the prevention and mitigation and preparedness aspects.

This aspect includes Early Recovery which means, under IRR Rule 2 Section 1, the multidimensional process of recovery that begins in a humanitarian setting. It is guided by development principles that seek to build on humanitarian programmes and catalyze sustainable development opportunities. It aims to generate self-sustaining, nationally-owned, resilient processes for post-crisis recovery. Early recovery encompasses the restoration of basic services, livelihoods, governance, security and rule of law, environment and social dimensions, including reintegration and social and emotional rehabilitation of displaced populations.

Thematic Area 4. Disaster Rehabilitation and Recovery

The **Disaster Rehabilitation and Recovery** aspect covers concerns related to employment and livelihoods, infrastructure and lifeline facilities, and housing and resettlement. These are recovery efforts done when people are already outside of the evacuation center.

Specifically for Priority Area of Disaster Response and Rehabilitation and Recovery, **Operational Timelines** are used primarily to give an overall guidance on the "rapid" time element in providing humanitarian activities and recovering from disasters. Likewise, the operational timelines will guide the plan's implementation and monitoring activities for the two priority areas. These operational timelines are as follows:

Immediate Term (IT)	Within 1 year after the occurrence of the disaster
Short Term (ST)	Within 1 to 3 years after the occurrence of the disaster
Medium Term (MT)	Within 3 to 6 years after the occurrence of the disaster
Long Term (LT)	Beyond 6 years after the occurrence of the disaster

Davao City Disaster Risk Reduction and Management Plan Programs and Projects

It is the responsibility of Davao City Disaster Risk Reduction and Management Council to implement programs and projects whom it believes priorities to address the DRR requirements of the City. This includes, among others; a) Reconstituting the different BDCC's; b) Development of IEC materials for DRR/CCA; c) Strengthening the mainstreaming of different Development Plans of the City.

These are the priority programs that needs to addressed prior to the full implementation of this Plan:

Cross-cutting Concerns

Disaster Risk Reduction and Management cut accross the four(4) thematic areas. It basically connects and interacts with each other. It provides that the thematic areas relates with each other that it will compliment one from the other.

Health

Disasters carries with it other hazards. Everytime that disaster happens it includes other hazards that will create health impacts for the the communities affected.

Human-induced Disasters

Disasters encompasses those disasters which is the result of conflicts relative to the struggle of different sectors of our society. Armed conflicts continue to plague communities especially in the upland barangays of the City.

Gender Mainstreaming

Gender sensitivity is an integral component of this Plan. It also provides the City's thrust of ensuring that all plans should always be gender-sensitive and gender should not be a hindrance in the development of this plan.

Environmental Protection

Environmental protection is one of the most important component of DRR/CCA. Hence, in the formulation of this plan it provides for a concrete approach in the protection of the City's environment.

Cultural Sensitivity and Indigenous Practices

Modern technology has actually been an integral component in DRR. However, in this plan, cultural differences cannot be taken for granted since the City is home to many indigenous communities and different cultures within in the City.

Rights-based Approach

It is the responsibility of the City to protect the rights of the people. Not only because it is protected by the constitution but it forms part of the thrust of the City Government.

Implementation Strategies

Advocacy and IEC

DRRM requires understanding, especially for communities exposed to different hazards. Advocacy through information and education campaign shall be one of the most important components in ensuring that the lives of these communities can be protected.

Community-based Capability Building

It is the responsibility of the DRRMC to ensure that community-based capability building be given importance to ensure that communities can now be capacitated to respond to and from disaster or emergencies. This capability building will be anchored on ensuring that communities are the first responders during this event.

Contingency Planning

Contingency Planning is an essential component in every disaster/emergency. This plans basically determines the readiness of the DRRMC's to respond to any event. Resources needed for these events can be traced out and gaps can be determined.

Education on DRRM and CCA

The primary concern for DRR and CCA does not not lie only with the DRRMC's but likewise integrating DRRM and CCA in the school curriculum is an ongoing concern. By integrating this in the

curricula, it would mean that as early as in the younger years, everyone will have the ability to comprehend and understand why DRR/CCA is a concern for all.

Institutionalization of DRRMC's and DRRMO

Part of the crafting of this Plan is to ensure that DRRMC and BDRRMC's will be institutionalized. By institutionalizing it would mean that DRR be given continued concern in order that all initiatives to provide safe and resilient communities can be achieved.

Research, Technology Development and Knowledge Management

Continued conduct of research will always be taken into consideration. Priority will also be on developing and acquiring new technology to provide real time alert and warning system for communities.

Knowledge sharing and lessons learned from previous disasters/emergencies will also provide a better understanding for purposes of ensuring that gaps and lapses will not be repeated.

Networking and Partnership

Civil Society Organizations (CSO) play a crucial role in the implementation of DRR/CCA. Henceforth, it is the responsibility of the DRRMC to ensure that networking and partnership will be given priority. DRR/CCA always needs the participation of the CSO's not only because it was provided for by the law but simply their resources could help in promoting resiliency for the communities.

Pre-disaster Recovery Planning

This Plan also ensures that all of the thematic areas compliment with each other and address a given hazard that will provide a comprehensive approach in the DRR/CCA concern. With the occurrence of disasters, considerations on to how to provide life preservation and ensuring early recovery will form part of this Plan.

Implementation Mechanisms

Plans could not stand if its implementation will not be provided. Hence, in the ipmlementation of this plan several mechanism will be considered.

Disaster Risk Reduction and Management Council

The implementation of this plan will rely on the seriousness of the Council to address the given hazards in the City. Executive Order Number 7 (April 2, 2012) will still be the legal reference of the council until such time that it will be amended by the present administration.

Disaster Risk Reduction and Management Office

The DRRMO plays a vital role in ensuring that what has been stated in the plan will be implemented.

With mandates provided by Republic Act 10121, the DRRMO will ensure that the plan become a working mechanism to provide a society that will be safe from both natural and human-induced hazards that will result into a disaster.

Agency Leads and Implementing Partners

In the implementation of the plan, the different lead agencies and partners will work hand in hand in ensuring that activities laid down will be implemented that later will lead to the attainment of its objectives and goals.

Resource Mobilization

Resources is an important component in the implementation of this Plan. It is provided that each stakeholder can utilize their resources aside from other resources from the 5% Local Disaster Risk Reduction and Management Fund of the City and from other sources.

Monitoring and Evaluation

As an essential component of every plan, monitoring and evaluation as to how the programs and projects were implemented form a vital role in the Plan. This will ensure that outcomes, outputs and goals were achieved.

Amendment Clause

Like any other plan, this term plan also provides for amendments to be done as the need arises and the thrust of the Local Government will be incorporated.

Republic of the Philippines
OFFICE OF THE CITY MAYOR
City of Davao

Herewith is the Davao City Disaster Risk Reduction and Management Plan. It provides guidance in the conduct of providing the people of Davao City the assurance of having "A Safer, adaptive and disaster resilient Davao City Communities towards sustainable development".

This Disaster Risk Reduction and Management Plan is anchored on the National Disaster Risk Reduction and Management Plan and the Regional Disaster Risk Reduction and Management Plan, following the four thematic areas, with goals to wit:

- **Disaster Mitigation and Prevention** – *Avoid hazards and mitigate their potential impacts by reducing vulnerabilities and exposure and enhancing capacities of communities in the City.*
- **Disaster Preparedness** – *Establish and strengthen capacities of communities to anticipate, cope and recover from the negative impacts of emergency occurrences and disasters in the City.*
- **Disaster Response** – *Provide life preservation and meet the basic subsistence needs of affected population based on acceptable standards during or immediately after a disaster in the City.*
- **Disaster Rehabilitation and Recovery** – *Restore and improve facilities, livelihood and living conditions and organizational capacities of affected communities, and reduce disaster risks in accordance with the "build back better" principle*

This DRRM Plan is prepared in adherence to Republic Act 10121(May 27, 2010), the NDRRMP and the RDRRMP. It will be tested, revised and updated as required. All sectors are requested to advise the Council regarding recommendations for improvements.

RODRIGO DUTERTE
City Mayor
Chairperson, Davao City Disaster Risk Reduction and Management Council

**DAVAO CITY DISASTER
RISK REDUCTION
AND
MANAGEMENT PLAN**

I. DAVAO CITY PROFILE

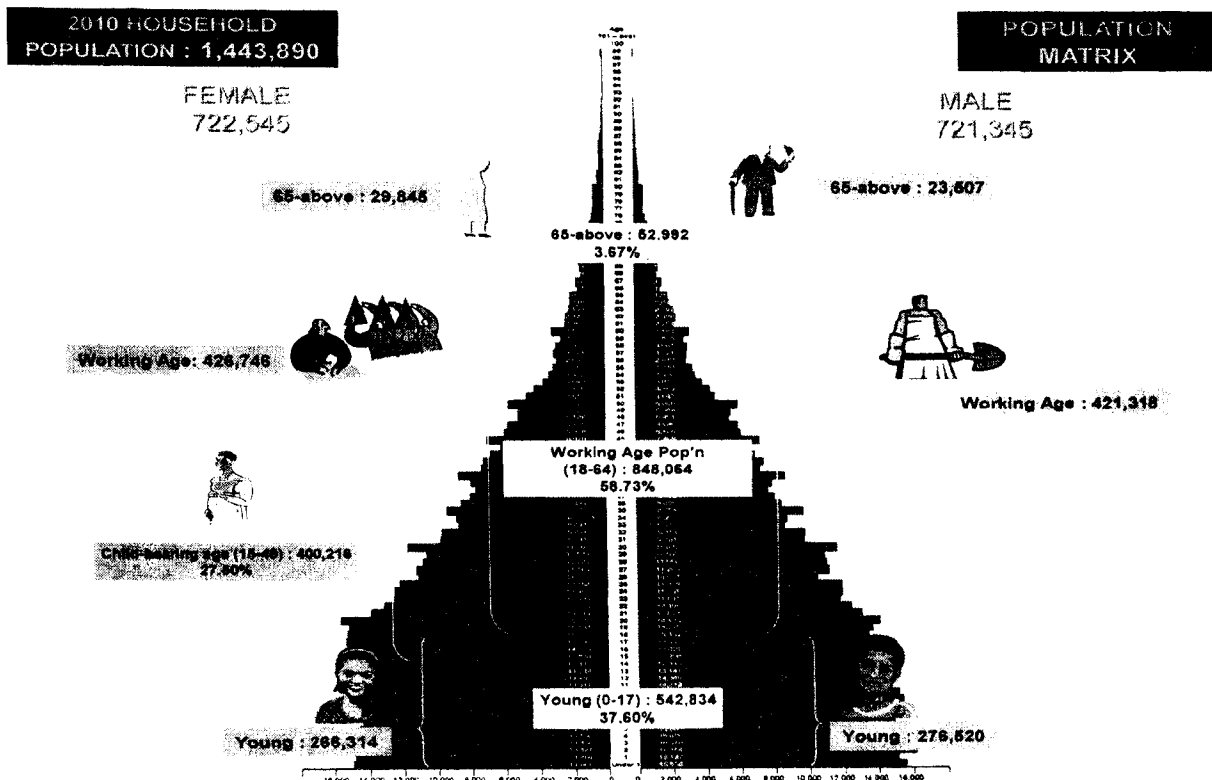

Background:

Davao City is considered one of the largest cities in the world in terms of land area. It has an expanse of more than 244,000 hectares and populated by about 1.5 million. It has one hundred eighty-two (182) barangays spread throughout the eleven (11) administrative districts. It is located at the south-eastern part of Mindanao and is the premier city of Region XI. It shares common boundaries with Bukidnon Province in the north; with Davao del Norte Province in the northeast; with Cotabato Province in the west; and with Davao del Sur in the south. It is bounded in the east by the Davao Gulf. It is also the biggest urban market in the growth polygon area called BIMP-EAGA (Brunei- Indonesia-Malaysia-Philippines East Asian Growth Area)

Of the one-hundred eighty-two (182) barangays, ninety-two (92) has been categorized as rural, and the remaining ninety are considered urban barangays.

Demography

Davao City, a highly urbanized City in Region XI, posted a total population of 1,449,296 persons as of 2010 population census, an increase of 85,959 persons over its total population of 1,136,337 persons in 2007. The increase in the population count from 2007 to 2010 translated to an average population growth rate (PGR) of 2.36%, lower than the 2.44% average annual PGR of the city for the period 2000 to 2007.

Population density was placed at 5.94 persons per hectare in 2010. Among urban barangays, population density reached 43 persons per hectare against the estimated population density of 1.52 persons per hectare among rural barangays. Population density in urban barangays in District I was notably highest at 60.88 persons per hectare.

Population can also be disaggregated into hydrologic boundaries or watersheds. A watershed is the area of land where all of the water that is under it or drains off of it goes into the same place. It is a bounded hydrologic system, within which all living things are inextricably linked by their common water course and where, as humans settled, simple logic demanded that they become part of a community. There are 8 watersheds that intersect Davao City. However, only 3 are completely within Davao City (Matina, Talomo, Lipadas).

Table 1. Demographics by Watershed

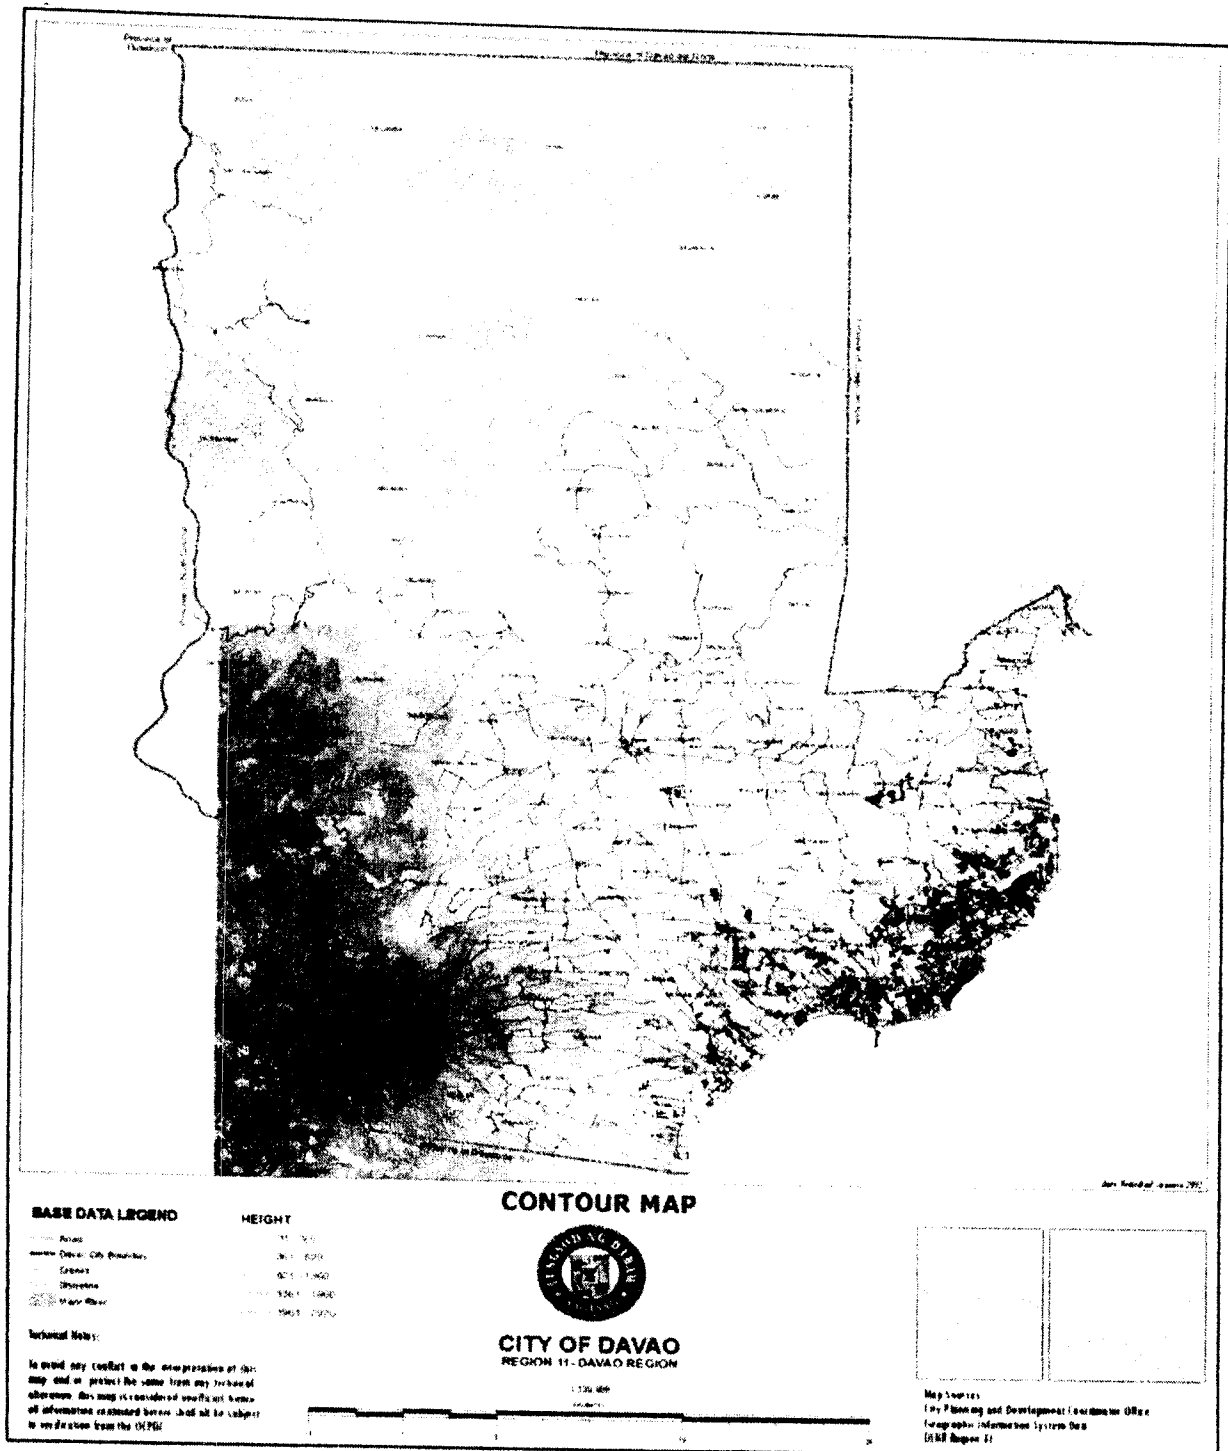

Watershed	Pop'n (2010)	HHs (2010)	Women (18-64)	Children (0-17)
Tuganay Watershed	8,278	1,670	1,456	3,582
Lasang River	17,032	3,539	3,037	6,911
Bunawan River	369,336	84,437	85,904	120,215
Davao River Watershed	528,501	124,258	124,516	192,402
Matina River	124,268	28,568	27,313	36,210
Talomo Watershed	275,110	62,870	52,896	84,767
Lipadas Watershed	112,570	25,909	23,539	39,129
Sibulan River	14,201	3,222	2,778	5,622
TOTAL	1,449,296	334,473	321,439	488,838

Topography

A substantial part of Davao City is mountainous, characterized by extensive mountain ranges with uneven distribution of plateaus and lowlands. The mountain range which delimits the western boundary of the city extends as far down to South Cotabato. This mountain range nurses the highest peak in the Philippines, which is Mt. Apo located at the boundaries of North Cotabato, Davao del Sur and Davao City. Mt. Apo has an elevation of about 10,311 feet (3,144 meters) above sea level. It has been considered as a semi-active volcano.

The large, contiguous lowland areas of Davao City are coastal plains and valleys extending inland as gently-rising valleys. These areas are found in the eastern part of the city, in Paquibato district, which is an extension of the vast lowlands at the head of Davao Gulf. The other substantial lowland areas are located in the south eastern part of the city along the western coast of the Gulf, and are in the districts of Bunawan, Buhangin, Agdao, Poblacion, Talomo, and Toril. These lowland areas are level to nearly land with slopes ranging from 0 to 3 per cent. These are generally composed of recent alluvium consisting of clay, silt and some sand and gravel.

Topographically, only the southeast quarter is plain and slightly hilly (along the entire coast and uplands north and westwards to Calinan, with slopes generally below four to five degrees. The plains and valleys merged gradually into the uplands, and the uplands in turn into the mountains. Although the eastern part of the city is a broad lowland belt, its surface is interspersed by low hills and knobs.

The entire land area of Davao City is drained towards the Gulf. Davao River and its numerous tributaries is the main drainage system of the city. Davao River originates from Bukidnon Province, flows towards the south meandering along the central part and finally flows eastward emptying into the Gulf at the southern periphery of the City Proper. The secondary drainage system of the city is the Talomo River which is the drainage outlets of the eastern slopes of Mt. Apo. Other major drainage system includes the Lipadas River, Matina River, Lasang River and Sibulan River.

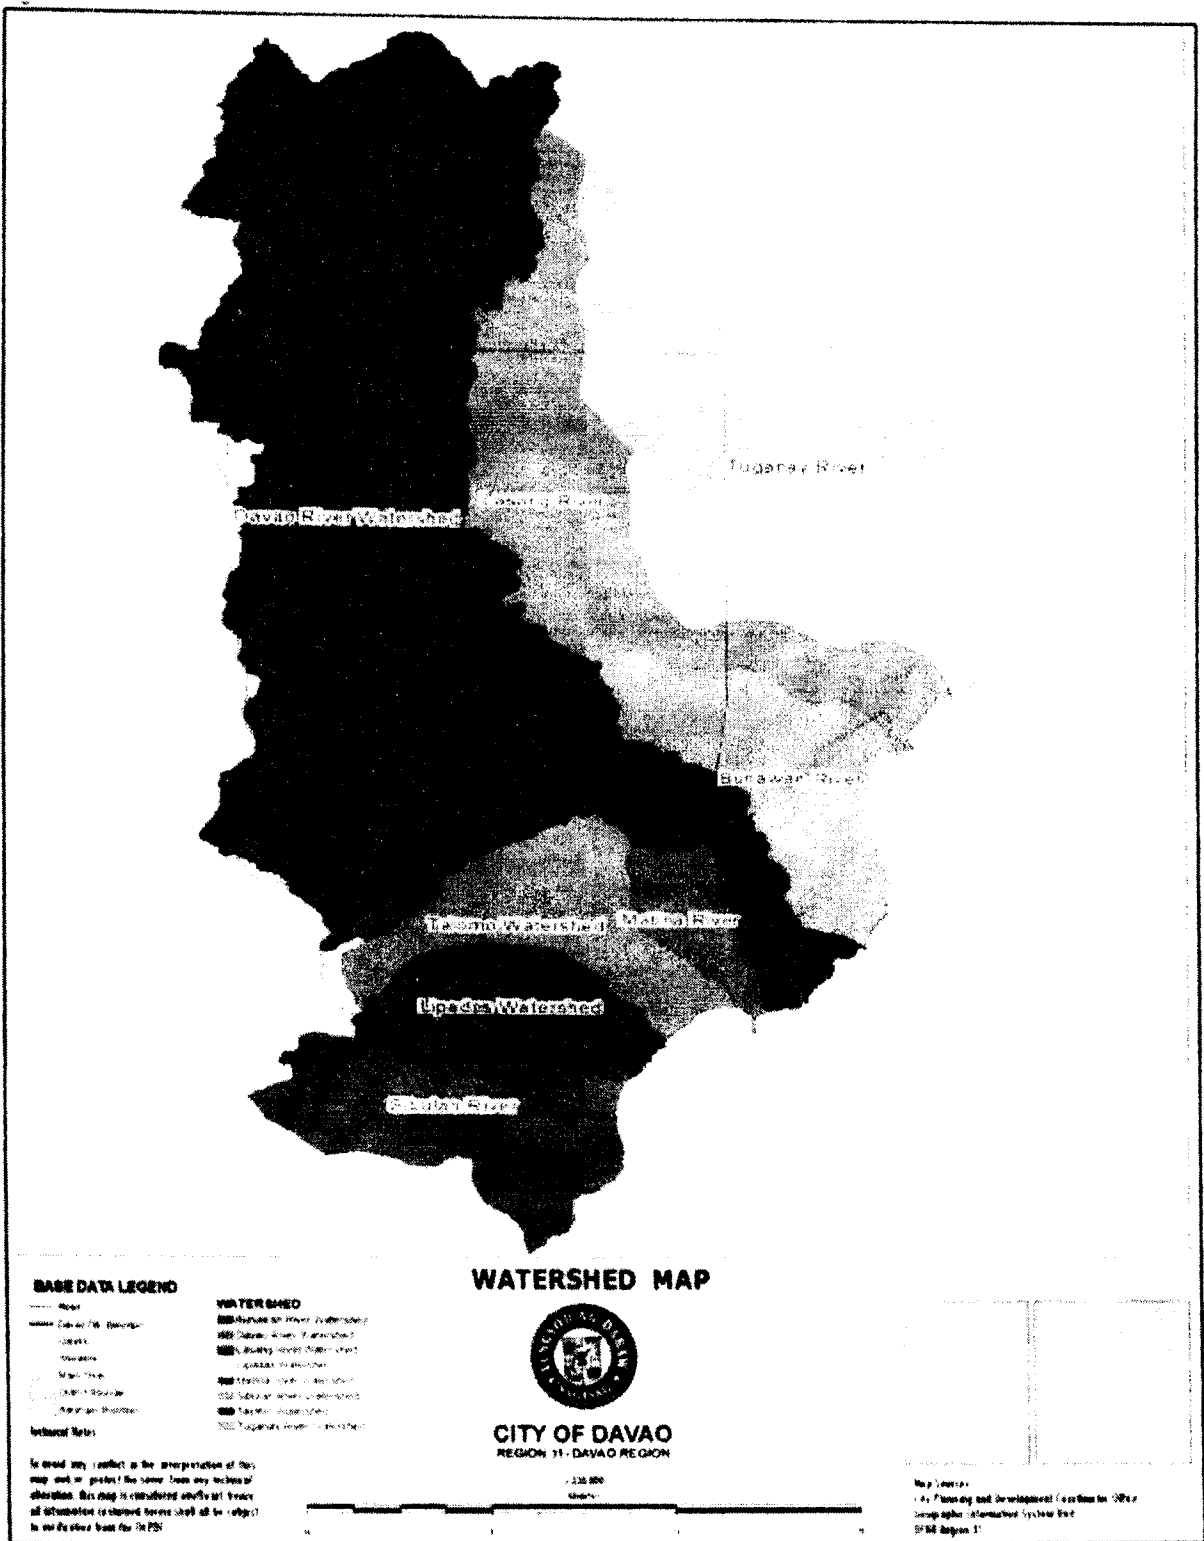

Hydrography

Davao City lies within the eight watersheds, namely; Tuganay watershed, Lasang Watershed, Bunawan watershed, Davao River watershed, Pangi watershed, Talomo watershed, Lipadas watershed and the Sibulan watershed. These rivers run crisscross towards the almost 54-kilometer stretch of shoreline to the Davao Gulf.

The southernmost is the Sibulan River Watershed having its headwaters in Davao City and draining towards the municipality of Sta. Cruz. Lipadas River Watershed cuts across from the slopes of Mt. Apo draining towards Lizada. Talomo Watershed has its headwaters in Mt. Talomo traversing parts of Calinan and Tugbok Districts flowing down to Barangay Talomo. The smallest major watershed is the Matina Pangi River Watershed which runs from Biao Escuela draining towards Matina Aplaya. The largest is Davao River Watershed which ironically has its headwaters in Bukidnon, covering parts of Marilog and Paquibato districts funneling down towards Poblacion District. Bunawan Watershed cover river that flow from Paquibato district entering Davao del Norte and draining back to Bunawan district. Tuganay River Watershed is almost totally part of Davao del Norte except the middle portion that enters Paquibato District and drained towards Lasang River.

Table 2. Watersheds in Davao City

Watershed	Total Area (Has)	Area in Davao City (Has)	No. of Brgys
Tuganay Watershed	74,747	18,120	2
Lasang River	45,390	29,132	8
Bunawan River	25,213	18,328	21
Davao River Watershed	175,776	121,385	91
Matina River	7,879	7,879	10
Talomo Watershed	21,578	21,578	26
Lipadas Watershed	16,796	16,796	19
Sibulan River	28,213	10,782	5
TOTAL	395,592	244,000	182

General Land Use

36,916 hectares have been designated as Built-up / Settlement Area in the approved land use plan of Davao City (1996-2025). Out of the 36,916 hectares, 11,512 hectares is designated for residential areas while 3,800 hectares is designated as commercial areas.

Table 3. General Land-use Classification (1996-2021)

CLASSIFICATION	AREA (HAS)	% OF TOTAL
Built-up/Settlement Area	36,916.74	15.13
Agricultural	163,936.26	67.19
Forest	27,626.00	11.32
Conservation	15,521.00	6.36
Total	244,000.00	100.00

In 2011, actual residential areas make up 8,382 hectares or 3.44% of the city's total area. The developments of residential areas in the Central Business District have spilled over to the adjacent districts of Talomo and Toril on the south and Buhangin-Agdao on the north. The barangay with the biggest residential area is Talomo. There are a number of households from the lower income groups that have resorted to informal settling or building their houses along buffer zones along rivers and shorelines. This exposes them to geo-hazards brought about by flooding and storm surges. Various residential areas particularly along the major water systems of the city have been affected by flash floods damaging property and claiming lives.

Areas used for commercial purposes comprise 1,583.32 hectares or 0.65% of the total land area of the city. The Central Business District (the area spanning SM Ecoland to Agdao and Buhangin) is the center of commerce and trade. The commercial establishments vary from generally small, medium and large commercial complexes. In the past ten years the expansion of the commercial establishments in the areas of Matina, Lanang and Buhangin was led by the construction of malls. These malls were developed by local and Manila based companies. Many of the residences in the Central Business District are increasingly improved into mixed use: residential building also provide commercial space to take advantage of their prime location.

Infrastructure

The total road network in Davao City spans 1,856.24 kilometers with barangay roads registering the longest road length at 1,012.04 kilometers (54.52 per cent). These barangay roads are generally either gravel roads (54.12 per cent) or earth roads (37 per cent) and are mostly located in Districts II and III, particularly in Paquibato and Marilog, while only 4.56 per cent is classified as concrete. City roads span 721.79 kilometers (38.88 per cent), more than half of which is concrete (53.81 per cent) while 42.12 per cent remains gravel and the remainder are asphalt roads. National roads cover 122.41 kilometers, of which more than three-fourths are concrete.

Table 4. Inventory of Roads by System Classification and Type of Pavement, Davao City, 2012

Roads by System Classification	Right of Way (ROW)	Total Length	Concrete		Asphalt		Gravel		Earth	
			Km	%	Km	%	Km	%	Km	%
National	20-30	122.41	93.38	76.28	12.67	10.35	16.36	13.37	-	-
City	20	721.79	388.36	53.81	29.41	4.07	304.01	42.12	-	-
Barangay	15	1,012.04	46.13	4.56	40.61	4.01	547.74	54.12	377.56	37.31

Sources: City Engineer's Office (CEO) and DPWH XI

There are 65 bridges in the city, 36 (55.38 per cent) are located in District III while 22 (33.85 per cent) are in District 11 and seven (7) are found in District I. Steel bridges (18) dominate the type of bridges in District II. There are 24 bailey bridges mostly located in District III.. There are 25 steel bridges mostly situated in District II (18). There are 16 concrete bridges mostly located in District III.

Table 5. Inventory of Bridges by Location, by Type, 2012

	Bailey	Steel	Concrete	Total
Bridges	24	25	16	65

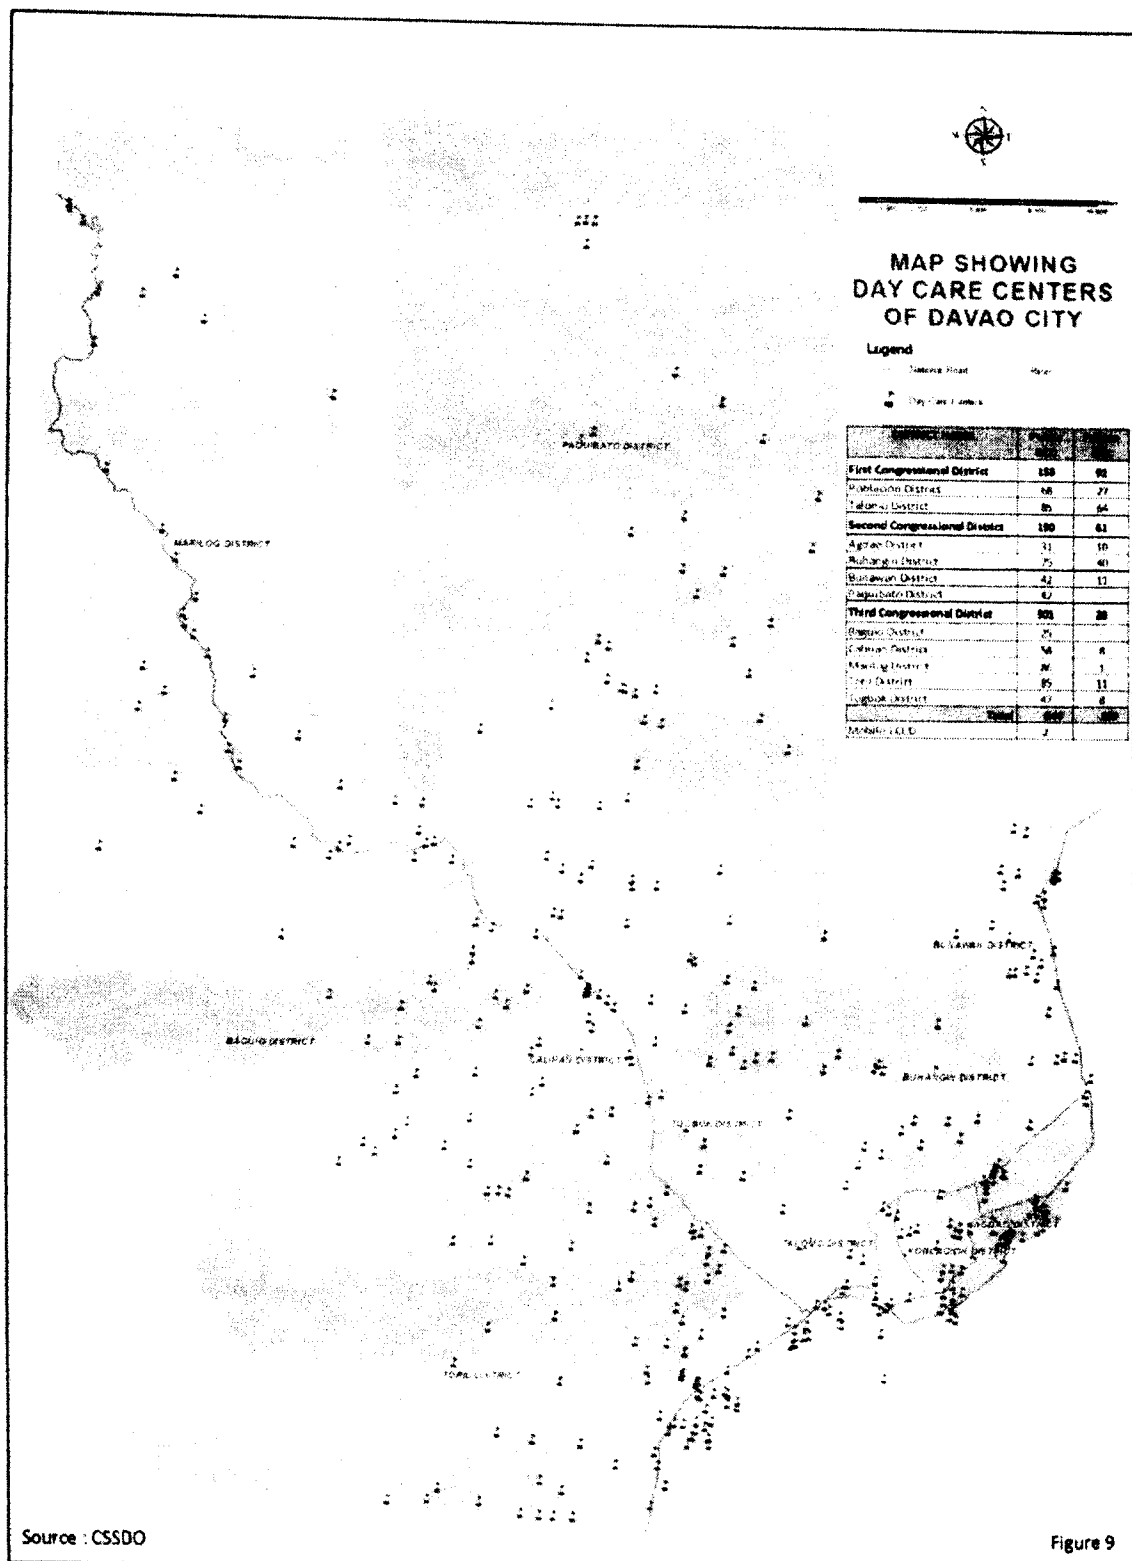

In addition, there are also 34 supplementary bridges that serve as access in the far-flung areas of the city. These are classified either as reinforced concrete box culvert (RCBC) or cable hanging bridge/footbridge.

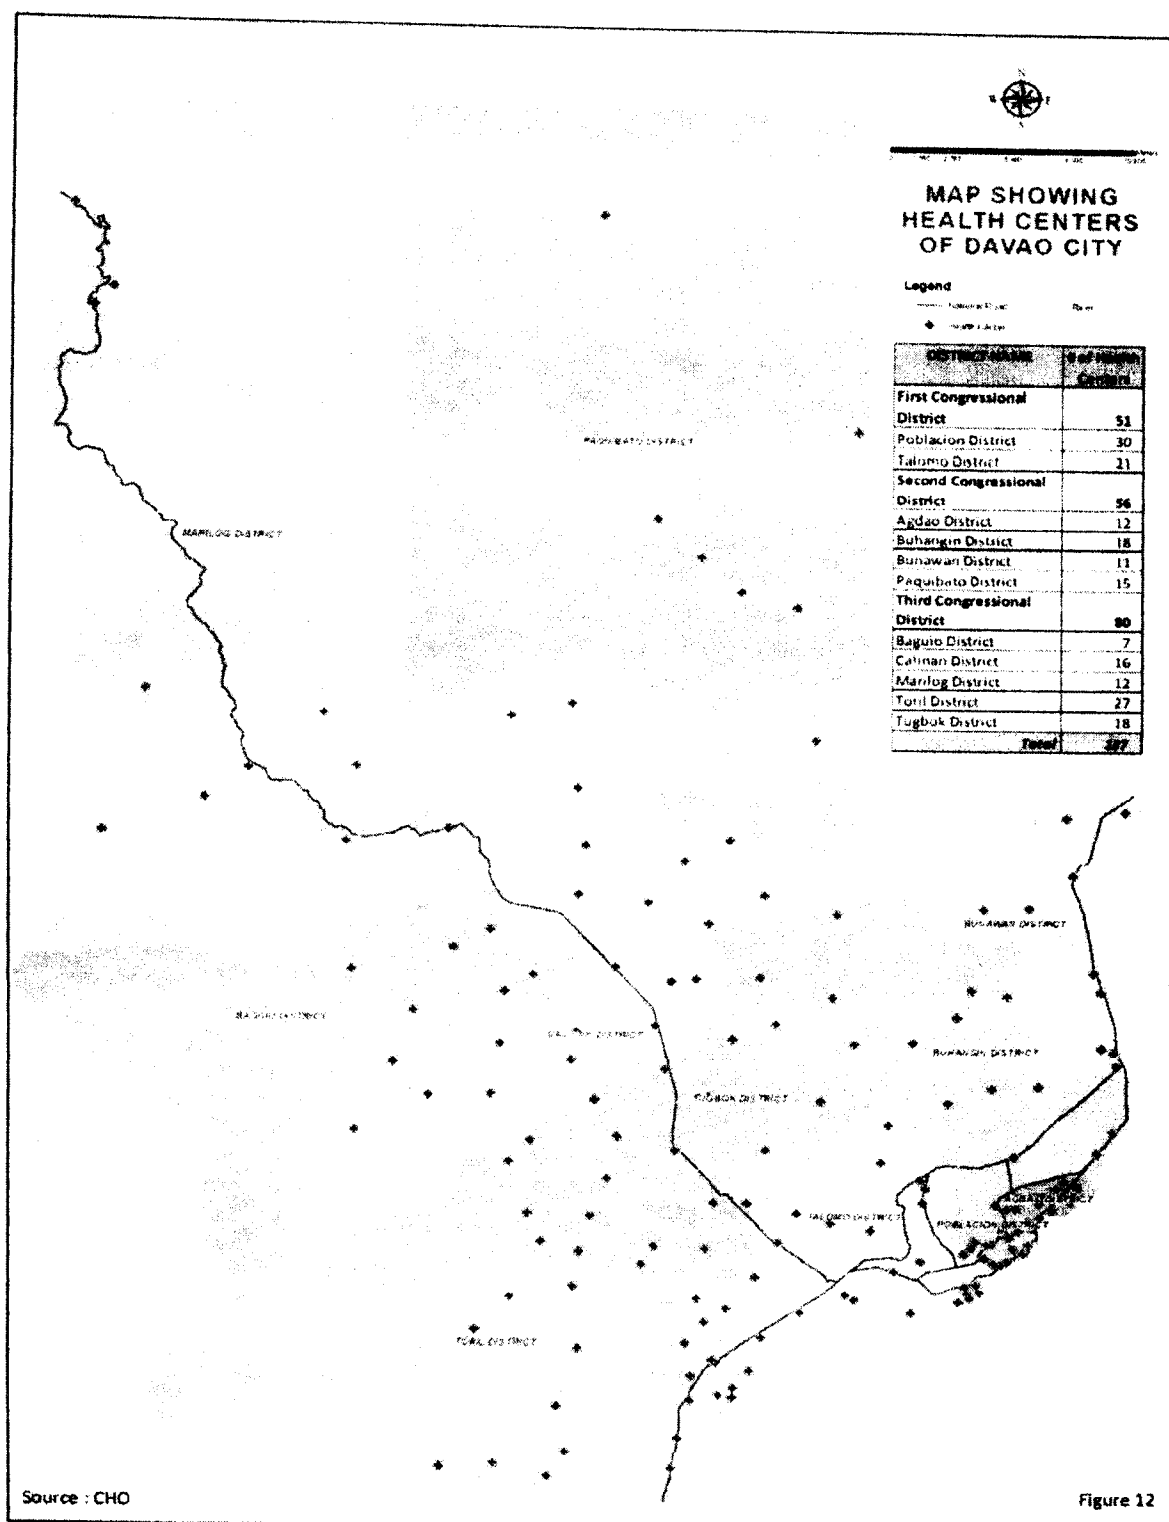

In terms of social infrastructure that serves as conduit to basic health, early childhood care and education, there are a total of 644 Public Day-care Centers, 180 Private Day-care Centers and 187 Health Centers in Davao City. There are also 356 Public Schools in Davao City (286 elementary and 70 secondary)

Table 6. Number of Daycare and Health Centers, by Administrative District, 2012

Administrative District	No. of Brgys.	Daycare Centers (Public)	Daycare Centers (Private)	Health Centers
Talomo	14	85	64	21

DAVAO CITY	182	644	180	187

Weather

Davao City enjoys a mild tropical climate. Compared with other parts of the Philippines in which there is a distinct hot and wet season. It enjoys the privilege of a climate where the days are always sunshiny and mild followed by nights of rain. The city is outside the typhoon belt and lacks major seasonal variations.

From 1990 to 2010, the average annual temperature varied from 34.24 C (highest) in April to 21.43 C (lowest) in January. The average annual rainfall in 1990 was recorded at 140 mm and reached 150 mm in 2010 as recorded in two rain stations in Bago Oshiro and Davao International Airport.

The predominant wind direction is northward from the Davao Gulf where the cooler air of the sea replaces the warm air mass over the city. A surrounding chain of mountains protect the city effectively from strong winds.

The city does not have a pronounced wet or dry season, but has a rainfall that is evenly distributed throughout the year. The city experiences heavy downpours but is practically typhoon-free. However, in December 4, 2012 the City has partly experienced the effects brought by Typhoon Pablo (Bopha).

Climate Change

As stated in the UN International Strategy for Disaster Reduction (ISDR) Policy Issues and Guidelines, water-related disasters account for 90 percent of all natural disasters, and their frequency and intensity is generally rising.

Based on the projections made by PAGASA, seasonal rainfall is expected to decrease in the next 50 years but there is an expected significant increase for the months of December to February. As a direct effect, floods are expected to be more severe. These projections also indicate increase in days with temperatures ranging 35°C and above as well as the number of dry days.

Table 7. Seasonal Rainfall change (in %) in 2020 and 2050 under medium range emission scenario

Months	Observed baseline (1971-2000) (mm)	Change in 2020 (2006-2035)	Change in 2050 (2036-2065)
DEC, JAN, FEB	288.1	18.1	15.2
MAR, APR, MAY	347.1	-9.8	-12.0
JUN, JUL, AUG	494.1	-7.8	-12.6
SEP, OCT, NOV	442.3	-2.4	-4.5

Source : PAGAS

Moreover, days with heavy rains are also expected to increase. These changes can result to extreme events like El Nino or La Nina and also flooding.

Table 8. Frequency of extreme events in 2020 and 2050 under medium-range scenario in Davao del Sur

Province	Station	No. of Days w/ Temp Max > 35°C			No. of Dry Days			No. of Days w/ Rainfall > 150mm		
		Obs (1971-2000)	2020	2050	OBS	2020	2050	OBS	2020	2050
Davao del Sur	Davao	109	2,981	5,373	7,930	4,789	5,368	2	3	4

Hazard Profile

The dominant geomorphological processes acting per terrain mapping unit were identified and evaluated by the MGB. This is very useful in determining the potential geo-hazards in the city.

Flooding - Areas naturally prone to flooding are all the fluvial landforms. However, detailed analysis and study is needed to further subdivide the fluvial landform into various susceptibility and vulnerability classes. The areas delineated with high susceptibility to flooding correspond to approximately 30-50 year floods. Flooding occurring outside the delineated flood prone areas could be mainly man-induced resulting to excessive overland flow or runoff

Mass Movement - At least four (4) factors (soil class, slope, presence of landslide and landslide potential) were considered in the delineation of the landslide susceptibility classes. Areas which are naturally susceptible to mass movements are the denudational landforms. However, based on landslide mapping and inventory mass movements were also noted in other areas that are moderately deep to deeply incised valleys of the volcanic landform, the structural-denudational landform and the karst landform.

Erosion - Generally the rate of erosion is controlled by slope, climate, and nature of bedrock, vegetation cover and human intervention. The delineated erosion susceptibility classes for the study area considered only the natural factors particularly the slope, soil and underlying lithology. The present land use and cultivation/farming practices could also result to induced erosion.

Earthquake-induced hazards (seismicity, liquefaction) - Liquefaction is a geo-hazard that results from seismicity/earthquake and defined as the granular material in solid state, which behaves and deforms like a liquid as a consequence of increased pore-water pressure due to earthquake shaking. Generally, areas belonging to the fluvial landforms are the most susceptible to liquefaction being overlain by alluvial deposits wherein the four conditions mentioned above could be present.

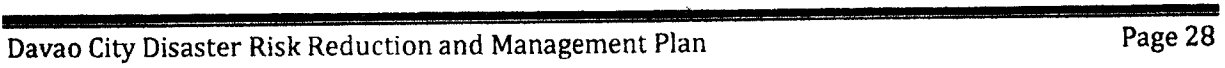

Volcanism - Mts. Sibulan, Talomo and Apo are a volcanic complex. The Sibulan-Talomo volcanic complex was previously classified as non-active cones, therefore preparation of a volcanic hazard map at this time is not necessary. Although Phivolcs consider Mt. Apo as potentially active, this has to be further studied.

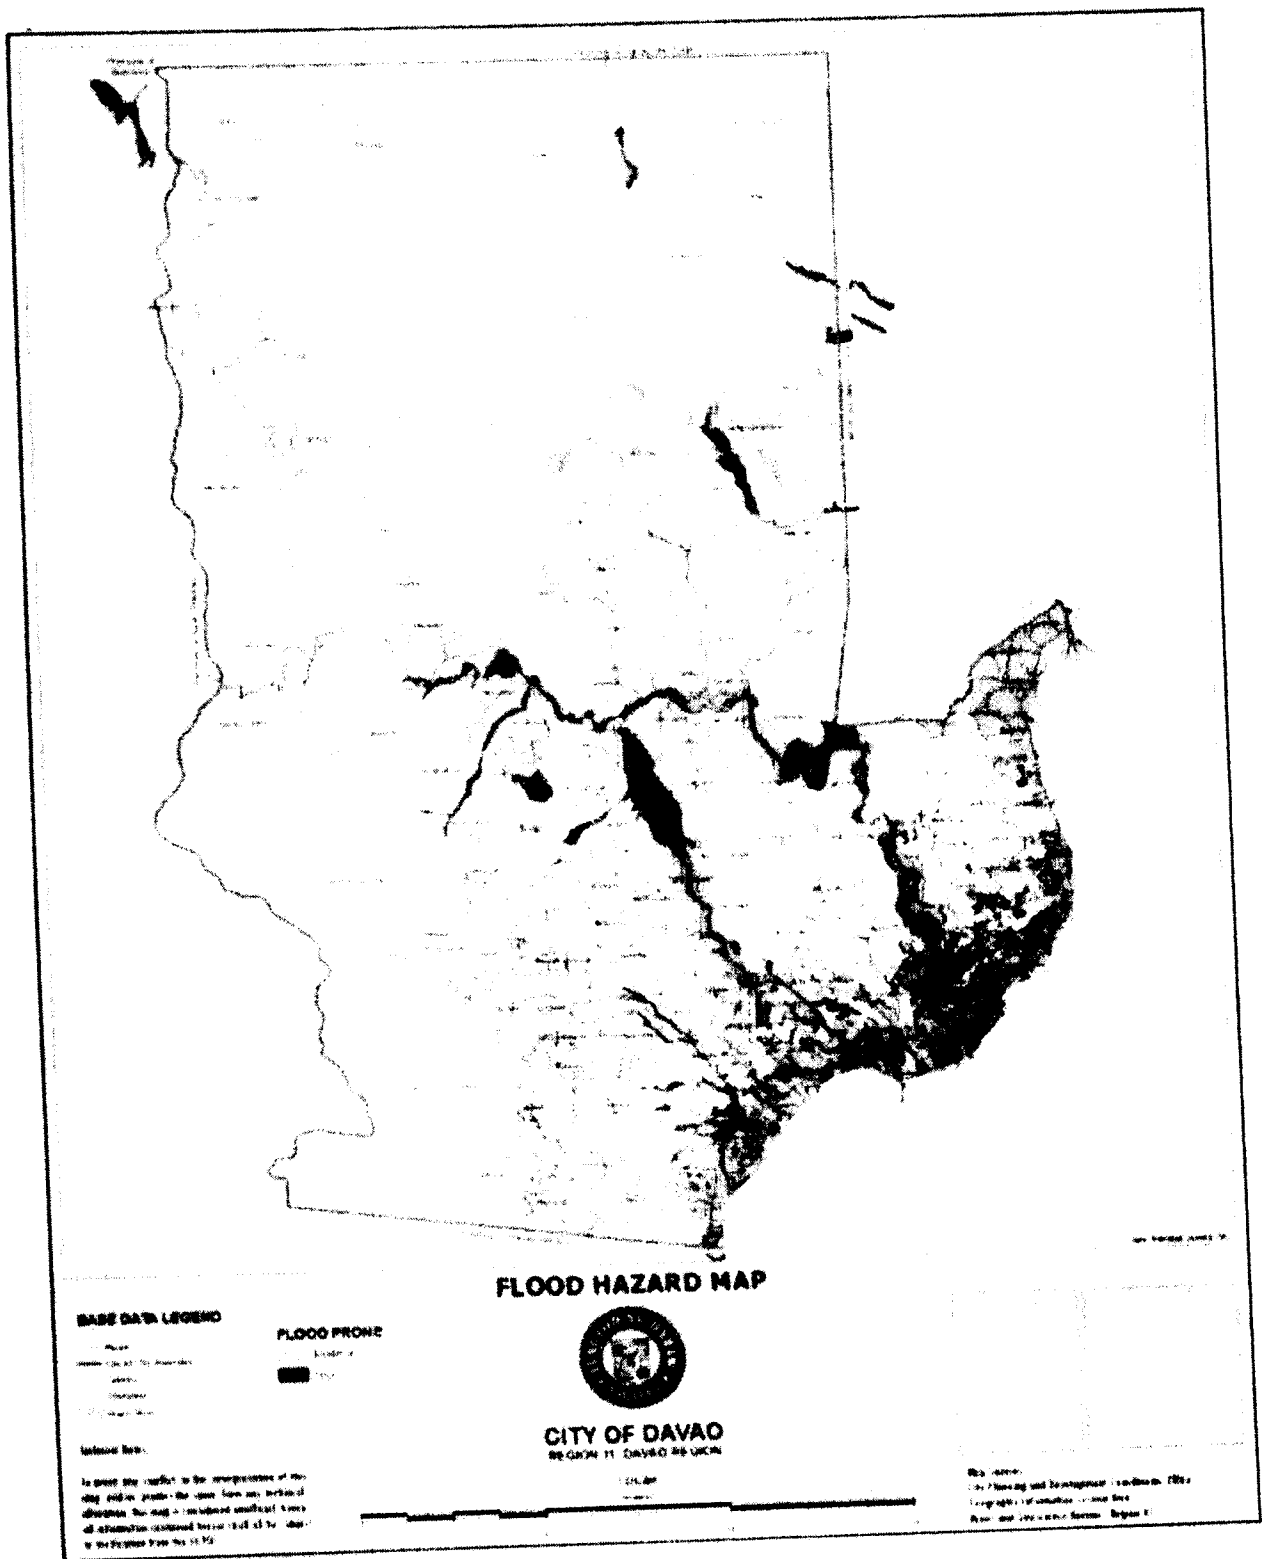

A total of 1,377 hectares of the 13,000 hectares built-up areas of Davao are within areas that are considered to be highly susceptible to flooding as categorized through the Terrain Analysis of the MGB.

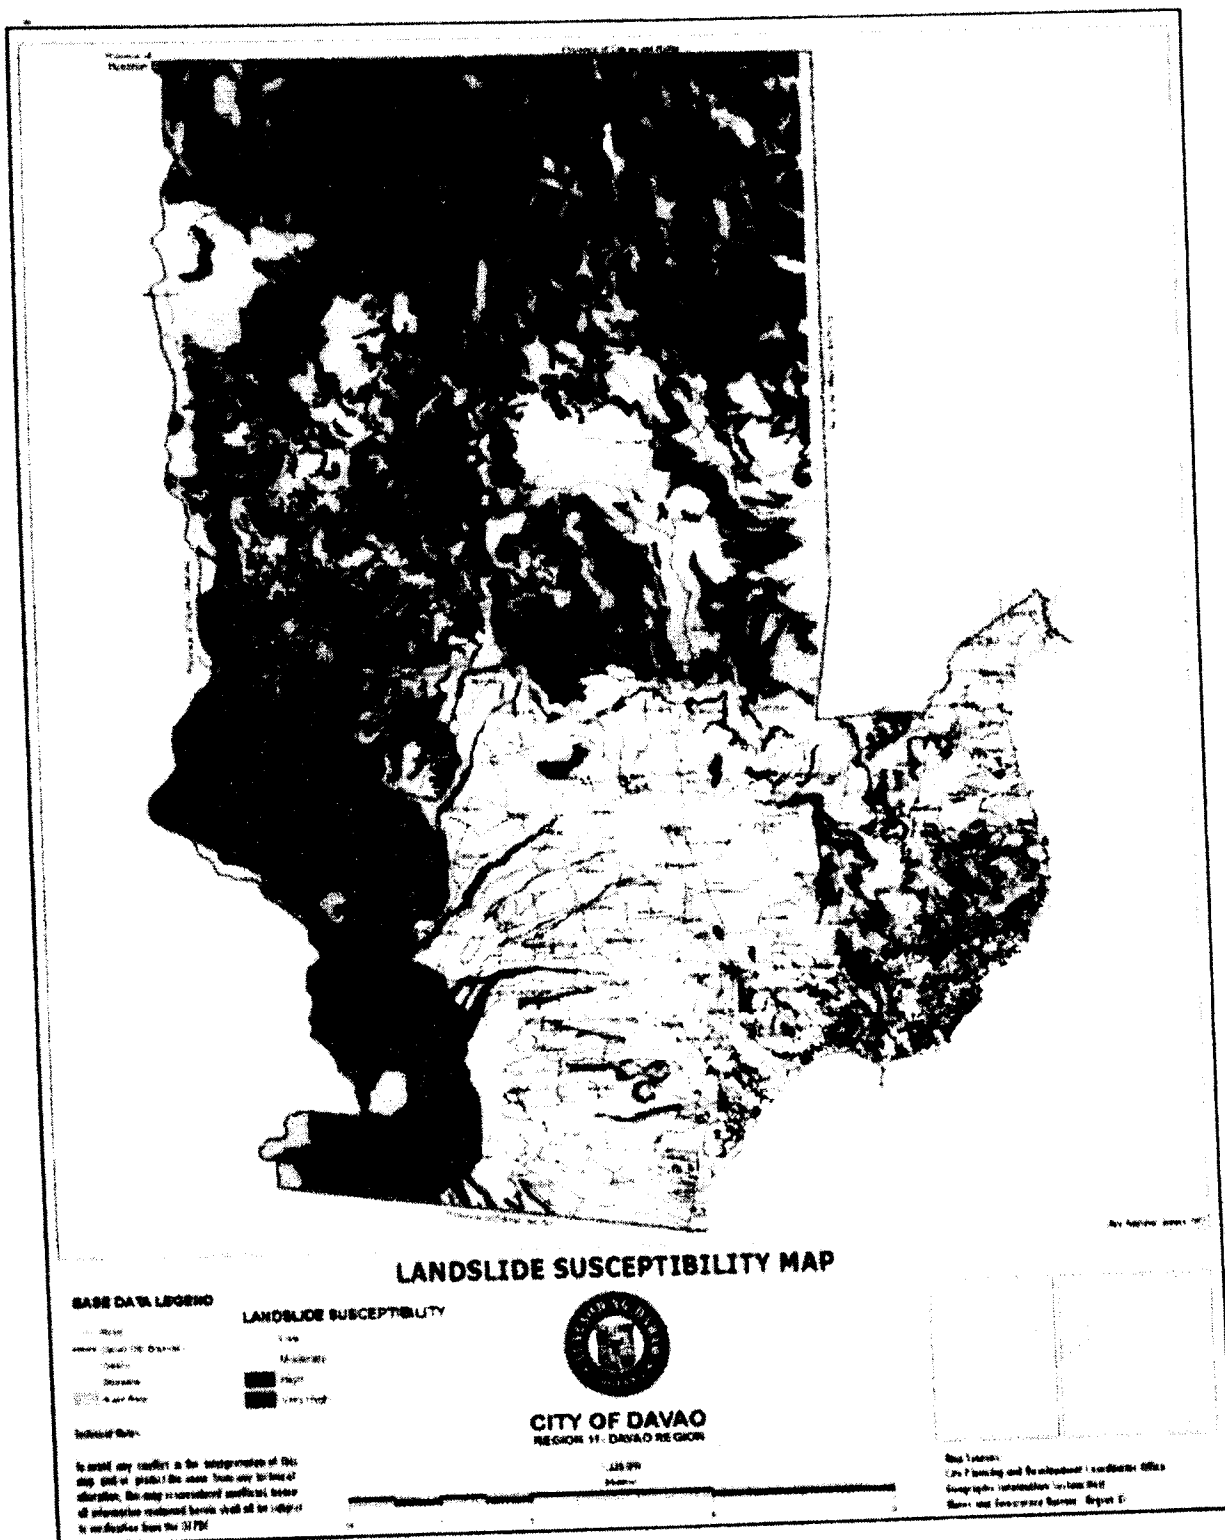

Also categorized are other rain-induced hazards like landslide and erosion. There are 788 hectares of built-up areas that are within areas that are considered highly and very highly susceptible to landslides.

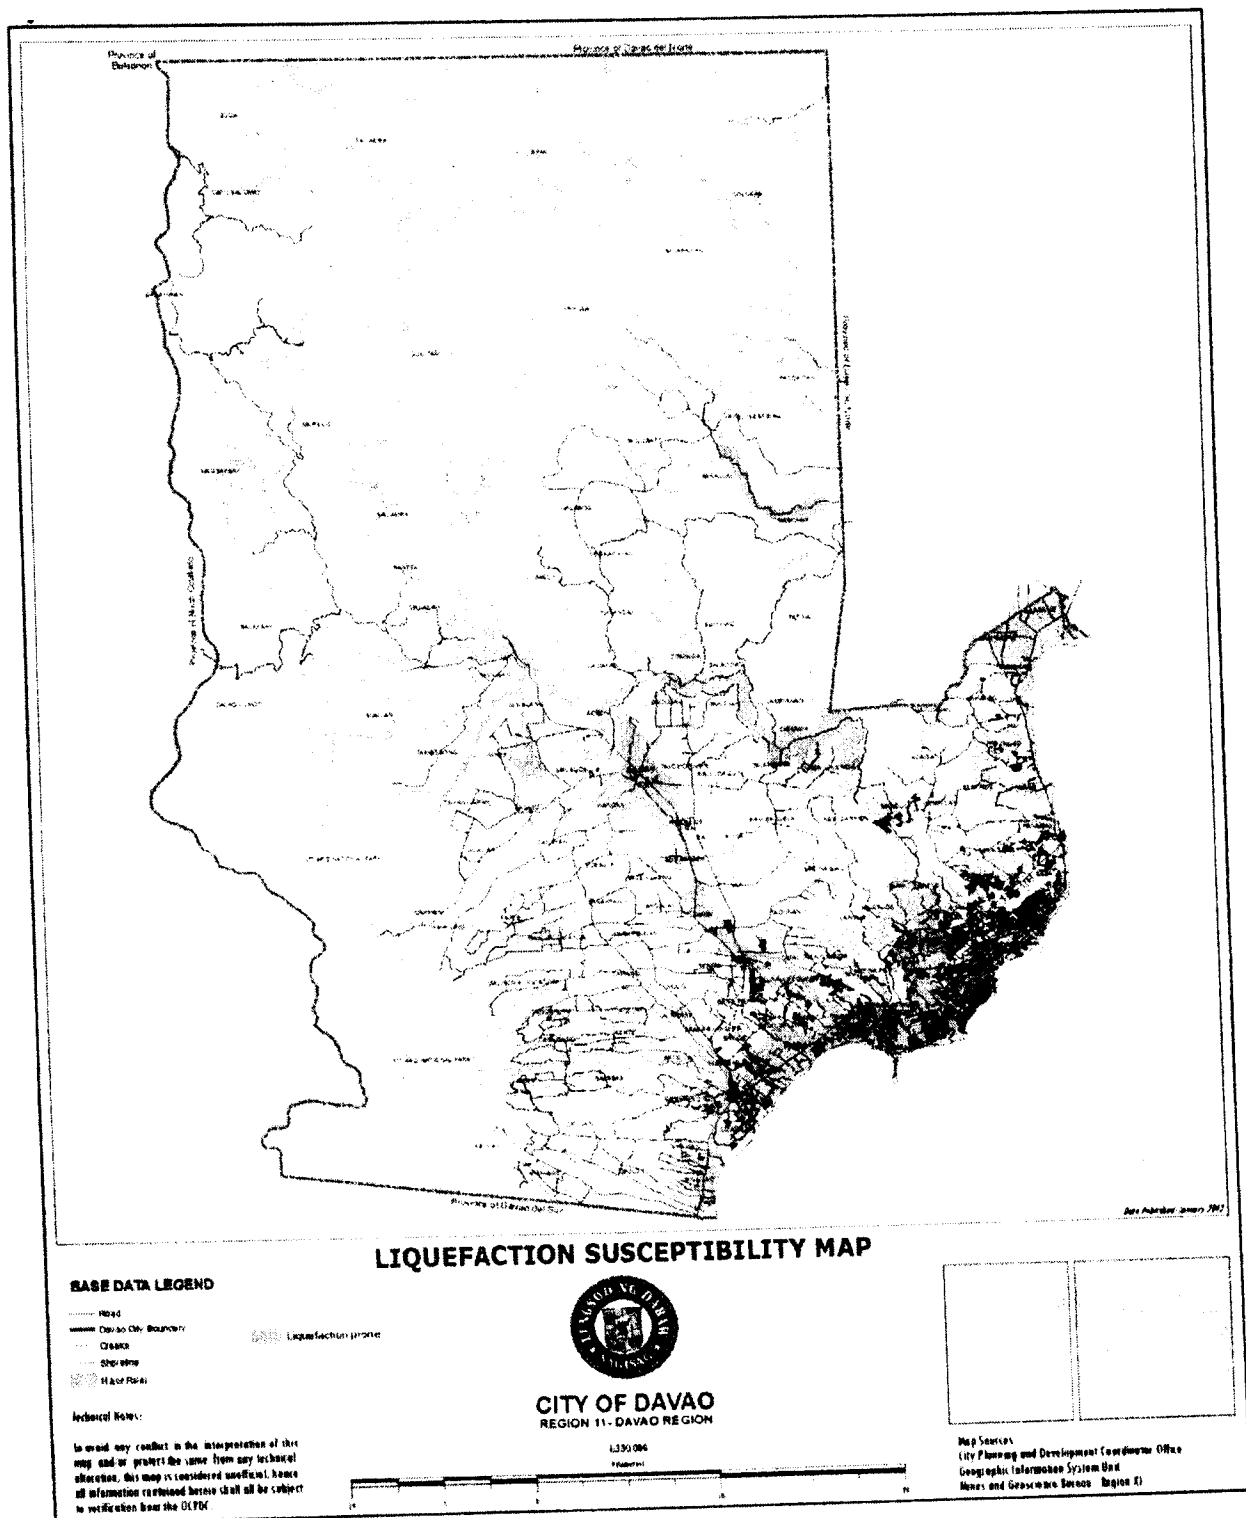

Table 9. Built-up Areas within Geo-hazard Areas

Hazard Areas	Total Area	Within Built-up areas (Has)
Hydro-meteorological hazards		
High Susceptibility - Floods	7,546	1,377
High & Very High Susceptibility – Landslide	151,289	788
Very High Susceptibility – Erosion	103,245	571
Geologic Hazards		
Liquefaction Prone	216,867	6,163

II. RISK PROFILE OF DAVAO CITY

Like any other area in the Philippines, Davao City is not exempted both from man-made or human induced and natural disasters.

In the past the City has been the recipient of different disasters.

From data available, the top three (3) calamities that hit Davao City repeatedly since 1996 to date are: 1) Fires and Conflagrations; 2) Floods; and 3) Sea Swells, in that order.

Noteworthy also were the terrorist-initiated incidents of bombing that have caused death and injury to unarmed civilians.

1. Fires & Conflagrations

Through the years Davao City has progressed and developed. But while progress and development are bustling as demonstrated by the construction of high-rise buildings and state of the art facilities and amenities while certain residential districts in the downtown area remain to be rustic and still maintain an old setting and poked with structures that are made of combustible materials that are highly susceptible to fire and conflagration. Without mentioning, many of the residential areas in the downtown are thickly populated.

2. Floods and Flooding Incidents

The general characteristics of the geographical/ topographical and meteorological conditions are not rigid and dogmatic indicators that Davao City is invulnerable to natural calamities. There are other factors that may adversely affect the meteorological conditions. There had been recent events in the past when intense and prolonged rainfall brought about by rain-producing phenomena – low pressure areas, tropical cyclones, ITCZs, etc. occurring in other parts of the country – have caused rivers to overflow and inundate adjacent low-lying areas. The areas along the riverbanks are relatively flat and susceptible to flooding, especially when other astronomical phenomena – such as high tide – coincide with the occurrence of heavy and prolonged rainfalls.

The June 28-29, 2011 flooding in Talomo District and the January 19-20 along the Davao River System has reversed the level of awareness of the people in the flooded areas. Aside from the direct damages that flooding events can cause, there are a host of other calamities that may occur as an aftermath of a flood. Interruption of the basic utilities will usually result to the lack of basic necessities such as water, food, and shelter, and the disruption of the sanitary regimen of a calamity-stricken community. These invariably can lead to an outbreak of gastro-intestinal and other diseases.

3. Monsoon Wave/Sea Swells

However, sea swells are practically a yearly occurrence. These occurrences are caused by southwest monsoon and usually happen during the second and third quarter of each year. From 1996 to date, collated data on sea swell occurrences indicate coastline communities are hit annually.

4. Rain induced Landslides

Based on data available, the City has not also escaped from the occurrences of landslides. At present, several areas in the City had been susceptible to landslide due to the topography of the City. Many of these areas had already experienced landslides brought about by continuous downpour.

In the past only barangays classified as rural were exposed to rain-induced landslides, but up to this date some barangays classified as urban is beginning to be exposed to this type of hazard.

5. Other natural hazards

While the city has not experienced any major natural disaster in terms of lives lost and properties damaged in the last 50 years, this should not be reason enough for the residents of the city and the government to be complacent and not to prepare for a worst-case scenario. The geographical location and the topographical character of the city makes it potentially susceptible to other geo-hazards and natural calamities such as earthquakes and its resultant hazards such as ground shaking, landslide, liquefaction, ground rupture and worst of all are the tsunamis. No major earthquake has so far devastated Davao City although it practically straddles on a fault line. There also had been incidents of soil erosion that have caused damage to crops and other agricultural products.

On the other hand, with Climate Change, sea level rise, drought and other associated hazard could also be a threat for the City.

6. Bombings

Finally, the city does not only have its fair share of natural calamities. It has also been a hapless victim to acts of terrorism. Bombing, hostage-taking, kidnap-for-ransom incidents are examples of acts of terrorism that have transpired in the city in the past and just recently this year. Bombings particularly have left scars not only to the bodies of victims who survived but also to the psychological make-up of those who witnessed them. The San Pedro Church bombings in April 1981 and in December 1993, the March 6, 2003 bombing at the waiting shed outside the Davao International Airport Terminal, the April 4, 2003 bombing outside the gate of the Sasa Port and the February 14, 2005 bombing at the Overland Transport Terminal are vivid reminders of the acts of terrorism that destroys hundreds of lives as a resultant effect of this man-made disaster.

III. DEVELOPMENT POLICIES AND INITIATIVES

Disaster Risk Reduction and Management Initiatives of the City

The passage of the Comprehensive Land-Use Plan (CLUP) of the City is a realization that the Local Government, policy-makers and other stakeholders are in the forefront of making the City a safe place to live in.

It also provides a new perspective in the environmental protection of the City. Several environmental ordinances have been passed by the local legislative body. Worthy to mention is the declaration of making the Shrine Hills as a protected area and the recently passed, Comprehensive Anti-Smoking Ordinance of the Davao City.

The reconstitution of the Davao City Disaster Risk Reduction and Management Council is a real initiative geared towards institutionalizing the DRR and CCA in the City.

Although, Davao City in 1996 has already created a Disaster Coordinating Division with eight (8) regular rank and file personnel tasked to implement disaster related concerns of the City. The passage of the Republic Act has strengthened the capacity of the City to address the growing concern for the protection of all people in the City.

Despite all the initiatives being undertaken by the City, challenges still continue to appear by virtue of the City's massive development brought about by influx of people for purposes of livelihood, education, recreation and or to reside permanently in the City because of its stability in peace and order.

Disasters that happened in the past have provided us a new challenge to face for another milestone in DRR and CCA. Families that have been displaced by disasters in the past were provided with the chance to recover from the effects brought about by these disasters. Although the City has initiated a City Shelter Program, many of these families still prefer to stay in areas susceptible to same hazards.

Building Back Better Principle

In the context of post-disaster reconstruction, the "building back better" principle is being promoted. However, current practices have not ensured that better and safer structures are built on safe locations during reconstruction and rehabilitation. Neither have engineering and land use practices been risk sensitive such that mitigation and prevention are addressed. Through the combination of increased knowledge and capacities, DRR mainstreaming into development plans and programs, and building institutional mechanisms through monitoring, evaluation and learning "building back better" can be achieved. Over time, improvements in the way DRRM and CCA are addressed in infrastructures, utilities, buildings, and housings should be seen.

Building capacities of people and institutions

Gaps in applying resiliency principles to actual practice exist at different levels of government, among disaster management practitioners and various stakeholders. Roles and responsibilities need to be understood in the context of emergency situations and DRR. Thus, competency-based capacity building programs on DRRM and CCA should be developed and continually conducted in order to be effective and responsive to the needs of communities and institutions. These capacity building activities will help enhance their understanding and skills so that DRRM and CCA principles and concepts can be applied, and concrete actions can be taken towards building resilience.

IV. DAVAO CITY DISASTER RISK REDUCTION AND MANAGEMENT PLAN

Thematic Area 1: Disaster Prevention and Mitigation

OVERALL RESPONSIBLE AGENCY: CITY PLANNING AND DEVELOPMENT OFFICE

Disaster Prevention and Mitigation provides key strategic actions to activities revolving around hazard evaluation and mitigation, vulnerability analysis, identification of hazard-prone areas and mainstreaming DRRM into development plans. It underscores the need for sound and scientific analysis of the different underlying vulnerability factors, risks and exposure to hazards and disasters.

Goal:

Avoid hazards and mitigate their potential impacts by reducing vulnerabilities and exposure and enhancing capacities of communities in the City.

Objectives:

1. *Reduce vulnerability and exposure of communities to all hazards*
2. *Enhance capacities of communities to reduce their own risks and cope with the impacts of all hazards*

Outcome 1.	DRRM and CCA mainstreamed and integrated into the Comprehensive Land Used Plan and the Comprehensive Development Plan and Budget
Indicators	▪ At the City level, 100% utilization of the 5% Local Disaster Risk Reduction and Management Fund dedicated for DRRM and CCA activities ▪ At barangay level, 100% utilization of the 5% Local DRRM Fund (LDRRMF) for the implementation of DRRM-responsive development plans and related activities ▪ DRRM and CCA mainstreamed in various plans (CDP and CLUP), laws, policies and/or ordinances enacted ▪ Davao City DRRM Council and Office created and functional
Lead Agency	Disaster Risk Reduction and Management Office (DRRMO)
Implementing Partners	City Administrator's Office, City Planning and Development Office, City Budget Office

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Impacts of risks on development programs and projects are well recognized in the plans and budgets of the City	1.1. Inclusion of a provision in the City's Annual Investment Plan appropriation guidelines on the utilization of the 5% LDRRMF dedicated solely for DRRM and CCA activities	100%	100%	100%
2. Decisions supported by tools and technologies that facilitate the financial and economically sound mainstreaming of DRRM and CCA	2.1 Build capacities to effectively mainstream DRRM and CCA in development planning, investment programming, project development and evaluation 2.2 Promotes capacities of barangays in the formulation of Barangay Development Plans and Programs	30%	60%	100%
3. Enhanced CSO participation in City DRRMCs	3.1. Develop selection criteria and accreditation for CSO participation in the DRRM Councils			
	a. City Level	100%		
	b. Barangay Level	30%	60%	100%
4. Measures to reduce vulnerability and to increase capacity to cope with disasters are integrated in plans, programs and projects	4.1. Sectoral representations in the crafting of the CLUP and CDP	100%		
5. Measures identified to ensure that programs and projects do not contribute to further risks	5.1 Updating of the Barangay profile especially on the Hazard and Risk	70%	100%	
	5.2 Apply science and evidenced-based scenarios in mainstreaming DRRM and CCA into plans, policies, programs	30%	50%	100%

6. Decisions supported by tools and technologies that facilitate the financial and economically sound DRRM and CCA mainstreaming	6.1 Crafting of tools for monitoring and evaluation	50%	100%	
7. City DRRM Councils reconstituted	7.1. Convene City DRRM Council per RA 10121	100%		
8. Local DRRM Offices established (facility, manpower and budget)	8.1. Institutionalize DRRM office with permanent plantilla positions for the DRRM officers and budget	30%	60%	100%

Outcome 2 **DRRM and CCA-sensitive environmental management**

- Indicators
- At the City, DRRM and CCA are integral objectives of environment-related policies and plans, including for land use, natural resource management
 - Alignment of the DRRMP

Lead Agency City ENRO

Implementing Partners City Agriculturist Office, DRRMO, Barangay Community Affairs Division, CPDO

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2015	2015-2016
1. Environmental policies with DRRM and CCA lens and component	1.1. Review and integrate DRRM and CCA into various environmental policies, plans, programs and projects (i.e., EO 26 or The National Greening Program)	100%		
	1.2 Crafting of Local Ordinances and Resolutions on Environment Protection	30%	60%	100%

Outcome 3 **Increased disaster resilience of infrastructure systems**

- Indicators
- At the City level, social and structural development policies and plans implemented to reduce the vulnerability of populations most at risk
 - Number of critical infrastructures assessed
 - Number of critical infrastructures retrofitted

Lead Agency City Engineer's Office

Implementing Partners City Building Official, City ENRO, BCCAD, CPDO, DEP-ED City Schools

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2015	2015-2016
1. Enhanced disaster mitigation and preparedness strategies for infrastructure systems	1.1. Advocacy for the implementation of the building code and use of green technology 1.2. Conduct inventory, vulnerability and risk assessments for critical facilities and infrastructures 1.3. Develop guidelines on the redesign, retro-fitting or operational modification of infrastructure 1.4. Integrate DRRM and CCA in the building code and local ordinances	All govt. buildings, schools and hospitals and other critical facilities esp. the DRRMC members		

Outcome 4

Community based and scientific DRRM and CCA assessment, mapping, analysis and monitoring are conducted and/or improved

Indicators

- Hazards and risk assessments based on hazard data and vulnerability information are available and include risk assessments for key sectors
- Systems are in place to monitor and disseminate data on key hazards and vulnerabilities
- Research methods and tools for multi-risk assessments and cost benefit analysis are developed and strengthened
- Fully functioning knowledge management institute to act as a repository of data, products and information from development partners
- Capacity enhancement for barangays and communities on vulnerability assessment, analysis and monitoring activities

Lead Agency
Implementing Partners

DRRMO

Public Safety and Security Command Center, BFP, DEP-Ed City Schools, PRC, CEO,

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. DRRM and CCA assessment and mapping tools	1.1. Conduct vulnerability assessment on a regular basis (every 1st quarter on election year – per existing DILG policy) and as the need arises	50%	100%	
	1.2 Conduct hazards mapping and assessment up to the barangay levels	100%		
	a. Barangay level	30%	60%	100%
Readily usable and accessible knowledge product as DRRM and CCA planning tools;	2.1 Establishment of Data Management system		50%	100%
	2.2 Conduct of studies on Disaster prevention Interventions and climate Change effects	50%	50%	100%
	2.3 Strengthen PEACE and Human Rights education, Values formation and education			
	2.4 Establishment of a knowledge management institute at the DRRMO	100%		
	2.5 Information dissemination through partnership with various media			
	2.6 Conduct of capacity building research studies and activities	30%	60%	100%
	2.7 Development of tool kits for vulnerability assessment			

Outcome 5 **Communities have access to effective and applicable disaster risk financing and insurance**

Indicators

- Government assets are insured
- Accessible and available risk financing options for communities

Lead Agency **City Budget Office**

Implementing Partners **BCCAD, City Administrator's Office, DRRMO, CEO, CVO, CAO, CPDO**

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Availability and access to various disaster risk financing and insurance schemes for vulnerable groups and/or communities	1.1. Produce IECs to encourage hazard insurance coverage for government, private infrastructures, and other business establishments 1.2. Update the directory of available financing windows for the City and Barangays 1.3. Promote insurance schemes among production sector, supply sector, local communities and responders	100%		
2. Mechanisms developed for increased risk financing modalities	2.1. Conduct research and develop new modalities for risk financing schemes 2.2. Develop an advocacy and risk communication plan to encourage communities to avail of risk financing options	30%	60%	100%

Outcome 6 **End-to-End monitoring system (monitoring and response), forecasting and early warning are established and/or improve**

Indicators

- Number of EWS established
- EWS installed and operational
- Local policies on early warning systems

Lead Agency **DRRMO**

Implementing Partners City Information Office, PSSCC, CENTRAL 911, DCPO, PCG(Davao Station), BCCAD

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Enhanced monitoring, forecasting and hazard warning	1.1 Develop and institutionalize EWS information sharing and communication systems between Barangays, communities and national government	100%	60%	100%
	1.2 Criteria development and /or accreditation standard for CBEWS	30%	70%	100%
	1.3 Facilitate the Procurement of equipment and establish facilities for EWS	50%	100%	
	1.4 Develop localized disaster EWS	100%	30%	
	1.5 Establish community-based EWS for various hazards	30%	100%	
	1.6 Train and tap Barangays and accredited volunteer responders for hazard monitoring			

Thematic Area 2: Disaster Preparedness

OVERALL RESPONSIBLE AGENCY: **DRRMO**

Disaster Preparedness provides for key strategic actions that give importance to community awareness and understanding, contingency planning; conduct of local drills, and the development of a national disaster response plan. In preparing communities and governments for possible disasters, predetermined needs based on information available are crucial. Risk-related information coming from the Prevention and Mitigation aspect is necessary in order for preparedness activities to be responsive to the needs of the people and situation on the ground. Also, policies, budget and institutional mechanisms established under the Disaster Prevention and Mitigation aspect will be further enhanced through capacity building activities, development of coordination mechanisms, among others. Through

these, coordination, complementation and interoperability of work in DRRM operations and essential services will be ensured.

It should be noted that the activities in this thematic area are not linear but cyclical and anticipate improvements over time. Behavioral change created by the Preparedness aspect is eventually measured by how well people respond to disasters. At the frontlines of disaster preparedness are barangays and communities. Overall, the bottom line is having more prepared citizenry and governments.

Goal:
<i>Establish and strengthen capacities of communities to anticipate, cope and recover from the negative impacts of emergency occurrences and disasters in the City</i>
Objectives:
1. <i>Increase the level of awareness of the community to the threats and impacts of all hazards, risks and vulnerabilities</i> 2. <i>Equip the community with the necessary skills to cope with the negative impacts of a disaster</i> 3. <i>Increase the capacity of institutions</i> 4. <i>Develop and implement comprehensive city disaster preparedness policies, plans and systems</i> 5. <i>Strengthen partnership among all key players and stakeholders</i> 6. <i>Optimize utilization of capacity-building resources and match with the needs of the different sectors</i>

Outcome 7

Increased level of awareness and enhanced capacity of the community to the threats and impacts of all hazards

Indicators

- Number of IEC materials developed
- Number of IEC campaigns conducted
- Target population reached

Lead Agency

City Information Office

Implementing Partners

DEP-ED City Schools, City Health Office, DRRMO, City Veterinarian's Office, DCPO, Task Force Davao, PRC-Davao City Chapter, CSO's

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. A comprehensive Davao City DRRM IEC program developed and implemented	1.1. Develop DRRM and CCA IEC and advocacy plan and program 1.2. Production of IEC materials for distribution in different barangays	30%	50%	100%
2. Manual of operations for communities developed and tested	2.1 Activities: Drafting of Manual of operations for Barangay responders	50%	100%	

Outcome 8

Communities are equipped with necessary skills and capability to cope with the impacts of disasters

Indicators

- Number of communities trained on disaster preparedness and response
- Number of teams with specialized training trained for response
- Number of DRRM managers and key decision makers trained
- Number of DRRM training institutions established
- Number of DRRM and CCA materials developed for formal education and training programs

Lead Agency

DRRMO

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Increased understanding and application of risk reduction measures and better prepared communities	1.1 Formulation of standard programs of instruction (POIs), training modules 2.1 Conduct of trainings and simulation exercises on disaster preparedness and response	50%	100%	

	3.1 Procurement of equipment for the Barangay responders and communities	30%	50%	100%
	a. Institutions, Establishments, Offices	100%		
	b. Barangay/Community level	30%	60%	100%
2. DRRM is mainstreamed and taken into consideration in decision making	2.1. Customized capacity building activities for disaster risk managers and key decision makers			
	a. City level	100%		
	b. Barangay level	30%	60%	100%

3. Sustained DRRM education and research through permanent training institutions	3.1. Establishment of DRRM Training Institute to conduct education, training, research and publication programs	25%	75%	100%
4. Increased awareness of students through DRRM and Climate proofing of educational materials and equipment	4.1. Strengthen the integration of DRRM and CCA to school curricula, (all level of education) and provide textbooks, teachers' guides and manuals	30%	60%	100%
	4.2. Conduct of DRRM and CCA education and training for the public and private sectors			

Outcome 9 Increased DRRM and CCA capacity of the City and Barangay DRRM Committees

- Indicators**
- Number of operational and self-reliant local DRRM councils
 - Number of fully-functioning local DRRM offices
 - Established barangay/community responders

Lead Agency Association of Barangay Captains

Implementing Partners DRRMO, BCCAD, City Administrator's Office, CSSDO, City Health Office

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Self-reliant and operational local DRRM councils	1.1. Accreditation of NGOs, CSOs, GOs, POs	100%		
2. Fully-functioning, adequately staffed and financially capable DRRM Office	2.1. Develop the local and line agencies DRRM plan 2.2. Conduct risk assessments, contingency planning, knowledge management and training activities 2.3. Inventory of resources 2.4. Stockpiling and prepositioning of resources 2.5. Establish the DRRM Operations Center	100%		

Outcome 10 **Developed and implemented comprehensive city preparedness and response policies, plans, and systems**

- Indicators**
- Number of approved disaster risk preparedness and response plans
 - Number of Incident Command Systems (ICS) institutionalized
 - Number of DRRM Preparedness Teams institutionalized
 - Number of integrated information system, protocols and procedures established
 - Continuity of operations of essential services plan integrated

Lead Agency DRRMO

Implementing Partners PSSCC, CENTRAL 911, CSO's, PRC Davao City Chapter

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Enhanced preparedness and response strategies, including coordination mechanisms and infrastructure	1.1. Develop and/or enhance and simulate scenario-based preparedness and response plans	100%		
	1.2 Develop and/or enhance a standard manual of operations for Operations Center	100%		
	1.3 Develop and/or enhance guidelines for emergency response teams	100%		

2. Increased coordination through the incident command systems	2.1 Capacitating Barangays on the proper guidelines for Incident Command System	30%	70%	100%
3. Better prepared citizenry	3.1 Community-based training on preparedness for emergency situations	100%		
	3.2 Community drills and exercises	100%		
	3.3 Emergency grab kits for communities		50%	100%

4. Increased coordination, complementation and interoperability of work in DRRM	4.1. Develop and/or enhance agreed protocols for information gathering and reporting	30%	60%	100%
	4.2. Develop and/or enhance common and integrated response assessment tools and mechanisms (i.e., SOPs for deployment for and coordination with rapid assessment teams, SRR, evacuation)	50%	100%	
5. Resources and services assessed	5.1. Conduct an inventory of existing resources and services	50%	100%	

Outcome 11	Strengthened partnership and coordination among all key players and stakeholders			
Indicators	▪ Number of MOUs/MOAs signed with CSOs and the private sector ▪ Increased participation of CSOs in preparedness activities ▪ Number of coordination mechanisms formulated ▪ Partnership mechanisms are included in the contingency plan			
Lead Agency	DRRMO			
Implementing Partners	CSOs, Accredited Disaster Volunteers, CPDO, ABC, BCCAD			

Outputs	Activities	Percent Completion		
		Timeline		
		2013	2014	2015-2016
1. Partnership arrangements among stakeholders established	1.1. Creation, maintenance and update of a directory or database of key players and stakeholders 1.2. Formulate coordination mechanisms and guidelines for partnership arrangements in the contingency plan	30%	100%	

Thematic Area 3: Disaster Response

OVERALL RESPONSIBLE AGENCY: CENTRAL 911/CITY SOCIAL SERVICES AND DEVELOPMENT OFFICE

Disaster Response provides for key actions that give importance to activities during the actual disaster response operations such as needs assessment, search and rescue, relief operations, and early recovery activities. Provides life preservation and meet the basic subsistence needs of affected population based on acceptable standards during or immediately after a disaster. The activities identified below will be done either before the actual response operations or during the disaster event. For those activities which need to be completed prior to actual response operations, they will be linked to activities earlier identified in the preparedness aspect. However, to ensure that the proper response “lens” is issued in doing the said activities, they have been included in this aspect. Overall, the success and realization of this priority area rely heavily on the completion of the activities under both the prevention and mitigation and preparedness aspects.

This aspect includes Early Recovery which means, under IRR Rule 2 Section 1, the multidimensional process of recovery that begins in a humanitarian setting. It is guided by development principles that seek to build on humanitarian programmes and catalyze sustainable development opportunities. It aims to generate self-sustaining, nationally-owned, resilient processes for post-crisis recovery. Early recovery encompasses the restoration of basic services, livelihoods, governance, security and rule of law, environment and social dimensions, including reintegration and social and emotional rehabilitation of displaced populations.

Goal:
<i>Provide life preservation and meet the basic subsistence needs of affected population based on acceptable standards during or immediately after a disaster in the City.</i>
Objectives:
1. <i>Decrease the number of preventable deaths and injuries</i> 2. <i>Provide basic subsistence needs of affected population</i> 3. <i>Immediately restore basic social services and utilities</i>

Outcome 12	Well-established disaster response operations
Indicators	▪ Activated functional Incident Command System (ICS) by the first responder on site ▪ Availability of timely, accurate and reliable information during response ▪ Acquired additional equipments for timely and efficient response ▪ Rate of affected persons served ▪ Use of relief distribution mechanisms
Lead Agency	CENTRAL 911
Implementing Partners	DRRMO, CSSDO, PRC, DCPO, EASTMINCOM, PCG, TASK FORCE DAVAO, BCCAD, TMC

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3 mos.
1. Activated functional ICS on site	1.1. Activation of the ICS at the City and Barangay 1.2. Strengthened the ICS mechanism and approaches	Slow onset disaster: activate 24 hours prior to the incident Rapid onset disasters: within 12 hours after impact		

2. Well-established system of information gathering, reporting and dissemination	2.1. Issue public advisories in accordance with the protocols developed 2.2. Full Activation of the DOC	X		
3. Established and functioning system for coordinated and efficient relief operations	3.1. Activation of relief distribution points/ centers 3.2. Provision for food stockpile 3.3. Review and Strengthen of the mechanism of relief distribution/ operations	X		
4. Availability of equipment and response paraphernalia	4.1 Purchase of equipment and other emergency paraphernalia 4.2 Acquisition of rescue/response vehicles and other construction equipment	100% 100%		

Outcome 13

Adequate and prompt assessment of needs and damages

Indicators

- Rapid needs assessment conducted in all affected areas
- Damage assessment and needs analysis conducted covering all areas affected
- Integrated assessment from the City to the barangay levels

Lead Agency

CSSDO

Implementing Partners

DRRMO, CAO, CVO, CEO, BCCAD, Barangay DRRMC's concern

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3 mos.
1. Timely and appropriate and consolidated needs assessment reports	1.1. Activation of RDANA team 1.2. Prioritization of the RDANA in the Utilization of resources	Within 12 hours		

2. Timely and appropriate and consolidated needs assessment reports	2.1 Using the latest DANA assessment tool, consolidate, analyze and disseminate data by the DRRMC	Within 24 to 48 hours		
---	---	-----------------------	--	--

Outcome 14 Integrated and coordinated Search, Rescue and Retrieval (SRR) capacity

Indicators

- Number of persons rescued;
- Number of bodies retrieved, identified and turned-over to their respective families

Lead Agencies CENTRAL 911

Implementing Partners CHO, DCPO, DRRMO, Accredited Community Disaster Volunteers, PRC, CSSDO, TMC, PSSCC, EASTMINCOM, TASK FORCE DAVAO

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3 mos.
1. Persons found, retrieved & re-integrated/reconnected with their families	1.1. Develop and implement a system for SRR and proper disposal with concerned agencies 1.2. Documentation of Disaster Victim Identification (DVI)	Within 48 hours		

Outcome 15 Evacuated safely and on time affected communities

Indicators

- Number of persons transported and/or evacuated by voluntary, pre-emptive and mandatory actions

Lead Agency DRRMO

Implementing Partners PSSCC, CENTRAL 911, BDRRMC's, DCPO, ACDV's

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3months
1. Safe and timely evacuation of affected communities	1.1. Coordination with BDRRMC's 1.2. Activate an evacuation alert system and protocols	Within # of hours		

Outcome 16 **Temporary shelter needs are adequately addressed**

- Indicators
- Number of temporary shelters vis-à-vis number of people needing them
 - Restored education services when evacuation centers are schools
 - Number of evacuation centers with areas for nursing mothers
 - Separate area provided for the poultry, livestock and pets
 - Number of evacuation centers with livelihood training programs for the people

Lead Agency CSSDO

Implementing Partners DRRMO, CHO, CEO, CVO, CAO, CPDO(Housing Division), DEP-ED City Schools

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3 mos.
1. All evacuees and their assets are sheltered in adequately equipped facilities for all (including areas for lactating mothers)	1.1. Identification of standard-based relief shelters and sites			
	1.2. Provision of WASH services			
	1.3. Provision of tents and other temporary shelter facilities			
	1.4. Implement a set of minimum standard for temporary shelters	X	X	
	1.5. Adherence to guidelines on the timeline and proper use of classrooms as EC's in order not to hamper education			
	1.6. Provision of Standard space for lactating mothers in every EC and learning spaces	X		
2. Establishment of Women-Friendly Spaces	2.1. Putting up of Women Friendly Spaces for Counselling, IEC among women and education on GBV and Referral Pathway	X	X	

3. Child-friendly spaces or temporary learning spaces/areas in the evacuation center for continuity of education	3.1. Establishment of child-friendly spaces/temporary learning spaces/areas in the evacuation center for continuity of education	X	X	
4. Safety for the sources of livelihood of the people	4.1. Provide spaces for people's livestock, poultry and pets in the ECs	X	X	
5. Increased and diversified people's livelihood skills	5.1. Conduct livelihood-oriented activities for internally displaced persons- move to Outcome 19	X	X	
6. Area for worship	6.1. Provision of areas for prayer/religious activities			

Outcome 17 **Basic health services provided to affected population whether inside or outside ECs**

Indicators

- Number of patients seen, treated and served
- Number of identified high risk children enrolled in the nutrition in-emergencies program
- Water and sanitation services based on standards
- Minimum Initial Service Package objectives achieved

Lead Agency CHO

Implementing Partners CSSDO, CENTRAL 911, BDRMC's, PRC

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3months
1. All patients seen/treated and epidemics prevented	1.1. Medical consultation & nutritional assessment	X	X	

2. Mainstreaming and implementation of the Minimum Initial Service Package (MISP) Objectives	1.2. Capacity Building/Training on MISP			X
	1.3. Integration of MISP in the Local Health Plans			
	1.4. Provision of RH Kits and Hygiene Kits			X
	1.5. Capacity Building/Training on Basic Emergency Care (BEMONC)	X		
3. Water-borne diseases prevented	3.1. Assessment of water quality and conduct of quick damage repairs and road clearing operations;	X	X	
4. Database of hospitals and other health care providers	4.1. Determination if there is enough clinics and hospital to address the casualties	X	X	
5. Lifelines restored	5.1. Immediate restoration of lifelines	X	X	

Outcome 18

Psychosocial well-being promoted and mental health problems and risks reduced

Indicators

- Number of affected population which were provided w/ MHPS (mental health and psychosocial services)
- # of people who are undergoing trauma debriefing (critical incident stress debriefing)
- % of the population undergoing psychological stress debriefing

Lead Agency

CSSDO

Implementing Partners

CHO, CSO's

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3months
1. Disaster-affected population are in good mental and psychological state	1.1. Coordination among members of MPHSS 1.2. Psychosocial programs and referral 1.3. Conduct of first aid (<i>traumatic</i>) and/or psychological stress debriefings	With different phases; adopt the DOH guidelines and/or protocols		

Outcome 19 Coordinated, Integrated System for Early Recovery implemented

- Indicators
- Number of persons w/ continuing assistance (financial, livelihood)
 - % of vulnerable population provided with adequate and appropriate risk protection measures

Lead Agency CSSDO

Implementing Partners DRRMO, CEO, CAO, CVO, BCCAD, CPDO

Outputs	Activities	Operational Timeline		
		1-7 days	1-3 months	Beyond 3 mos.
1. Mechanisms for coordinated and integrated early recovery established and essential services restored	1.1. Conduct of Post-DANA 1.2. Develop and implement a system for early recovery, to include specific activities addressing the needs identified 1.3. Develop partnership mechanisms with utility providers and key stakeholders 1.4. Design and implement life-saving measures other than relief or food distribution		X X X	 X

Thematic Area 4: Disaster Rehabilitation and Recovery

OVERALL RESPONSIBLE AGENCY: City Social Services and Development Office/CEO

The Disaster Rehabilitation and Recovery aspect covers concerns related to employment and livelihoods, infrastructure and lifeline facilities, and housing and resettlement. These are recovery efforts done when people are already outside of the evacuation centres.

Specifically for Priority Area of Disaster Response and Rehabilitation and Recovery, **Operational Timelines** are used primarily to give an overall guidance on the “rapid” time element in providing humanitarian activities and recovering from disasters. Likewise, the operational timelines will guide the plan’s implementation and monitoring activities for the two priority areas. These operational timelines are as follows:

Immediate Term (IT)	Within 1 year after the occurrence of the disaster
Short Term (ST)	Within 1 to 3 years after the occurrence of the disaster
Medium Term (MT)	Within 3 to 6 years after the occurrence of the disaster
Long Term (LT)	Beyond 6 years after the occurrence of the disaster

Goal:
<i>Restore and improve facilities, livelihood and living conditions and organizational capacities of affected communities, and reduce disaster risks in accordance with the “build back better” principle</i>
Objectives:
1. To restore people’s means of livelihood and continuity of economic activities and business 2. To restore shelter and other buildings/installation 3. To reconstruct infrastructure and other public utilities 4. To assist in the physical and psychological rehabilitation of persons who suffered from the effects of disaster

Outcome 20	Damages, Losses and Needs Assessed
Indicators	▪ % of affected constituents’ livelihood activities restored/revived through government /LGU support ▪ % increase in livelihoods established through government/ LGU support ▪ % of extent of damages (approved credit for affected sectors)
Lead Agency	CSSDO
Implementing Partners	DRRMO, CEO, CVO, CAO, BCCAD, DCCCI, DEP-ED City Schools

Outputs	Activities	Operational Timeline			
		Within 1yr	Within 1-3yrs	Within 3-6yrs	Beyond 6yrs
1. Post Disaster Needs Assessment	1.1. Conduct Post-Disaster Needs Assessment (PDNA) 1.2. Consolidation And Analysis of Post Dana Report	X			
2. Strategic Action Plan	2.1. Coordinate the formulation of the Strategic Action Plan for disaster-affected areas	X			

Outcome 21

Economic activities restored and, if possible, strengthened or expanded

Indicators

- % of livelihood activities restored/revived through government /LGU support
- % increase in livelihoods established through government/ LGU support
- % of approved credit for affected sectors
- % of increase in income
- % of affected sectors employed

Lead Agency

CSSDO

Implementing Partners

CAO, CVO, DCCCI, CSO's

Outputs	Activities	Operational Timeline			
		Within 1yr	Within 1-3yrs	Within 3-6yrs	Beyond 6yrs
1. Livelihood programs and projects	1.1. Identify the needed assistance and formulate/ implement appropriate programs	X			
	1.2. Institutionalize community- based technical skills training	X			
2. Credit facilities for affected sectors	2.1. Identify/ mobilize funding sources	X			
	2.2. Advocacy	X	X		
	2.3. Capacity-Building	X			

Outcome 22. DRRM/CCA elements incorporated in human settlement

- Indicators**
- % of affected Barangays implementing appropriate safety codes
 - % of affected Barangays providing safe relocation and resettlement areas
 - Relevant government housing cum livelihood programs developed or implemented

Lead Agency CPDO

Implementing Partners CSSDO, BCCAD, CSO's, CEO

Outputs	Activities	Operational Timeline			
		Within 1yr	Within 1-3yrs	Within 3-6yrs	Beyond 6yrs
1. Safe relocation sites	1.1. Identify and provide suitable relocation sites for affected population	X	X		
2. Disaster-resilient housing designed and reconstructed	2.1. Design/construction of disaster-resilient housing	X	X	X	
3. Self-sufficient communities with access to basic social services	3.1. Conduct trainings for social preparation of host communities and those that will be relocated to reduce conflict.	X	X		

Outcome 23 Disaster and climate change-resilient and infrastructure reconstructed

- Indicators**
- % of disaster-resilient transport infrastructure facilities rehabilitated/ reconstructed
 - % of constructed/ reconstructed social infrastructure (hospitals and schools) following safety standards
 - % of applications approved within the prescribed time (linked to risk transfer mechanism and anti-red tape act RA 9485)

Lead Agency CEO

Implementing Partners CSSDO, CPDO, City Building Official, BCCAD, DEP-ED City Schools, CSO's

Outputs	Activities	Operational Timeline			
		Within 1yr	Within 1-3yrs	Within 3-6yrs	Beyond 6yrs
1. Infrastructure facilities restored / rehabilitated according to safety and resiliency standards	1.1. Undertake the necessary rehabilitation or repair of damaged infrastructures	X	X	X	X
	1.2. Implement building code and promotion of green technology	X	X	X	X
2. Development permits approved within prescribed timeline	2.1. Close monitoring and/or tracking of approval of infrastructure projects and permits		X	X	X

Outcome 24

A psychologically sound, safe and secured citizenry that is protected from the effects of disasters able to restore to normal functioning after each disaster

Indicators

- % of vulnerable population provided with adequate and appropriate risk protection measures

Lead Agency

CHO

Implementing Partners

CSSDO, DRRMO, PRC, DEP-ED City Schools

Outputs	Activities	Operational Timeline			
		Within 1yr	Within 1-3yrs	Within 3-6yrs	Beyond 6yrs
1. Vulnerable population provided with adequate and appropriate risk protection measures	1.1. Develop systems for appropriate risk protection measures	X			
	1.2. Conduct of post-disaster/conflict needs analyses with affected communities	X			
	1.3. Develop systems of support and communication among key stakeholders	X			

7. Establishment of
 - Centralized Data Base
 - Knowledge Management and Training Institute
 - Davao City flood early warning systems (through automation and manual systems)
8. Development of IEC and advocacy materials on DRRM and CCA
9. Institutional capability program on DRRM and CCA for decision makers, public sector employees, and key stakeholders;
10. Strengthening the mainstreaming of DRRM and CCA to school curriculum

Cross-Cutting Concerns

The Davao City DRRMP recognizes that certain concerns cut across the four thematic areas. These include health, human-induced disasters, gender mainstreaming, environmental protection, cultural sensitivity or indigenous practices, and the rights-based approach. The Davao City DRRMP shall be utilized as the instrument by which the Davao City Government ensures consistency of DRRM measures with the physical framework, social and economic and environmental plans of barangays, communities, and other institutions in the City.

Health

People's vulnerability to disaster has become more complicated with the presence of climate change. Hazards such as floods and drought can overlap, resulting in another type of disaster. Minor disturbances in the environment surrounding the ecosystem can have far reaching consequences on the exposure of humans to health-related hazards like leptospirosis in floodings, rat infestations for drought; malaria and dengue (which increases mosquito abundance in areas experiencing warmer and damper temperatures, respectively). Likewise, rising sea-level will increase flooding events disproportionately affect the poor through sanitation of their water sources, and intrusion of sea waters in the different sources of waters. From this viewpoint, the City look into this very critical concerns and incorporated in the Davao City DRRMP.

Human-induced disasters

Since the City has not been exempted by this different human-induced disasters brought about by armed conflict and act of terrorism, this plan would also look into considering some very important concerns. In conflict affected areas, most people are vulnerable not only because they exposed to natural hazards but more often due to disasters more commonly associated with armed conflict and acts of terrorism such as bomb explosions. Considerations of the factors which contribute to these risks are important and should be looked into at all times, taking cognizance of the underlying causes of people's vulnerabilities.

	1.4. Build capacities of psychosocial care providers	X	X		
	1.5. Consultations and treatments/referral system	X			

List of Davao City DRRMP Priority Programs/Projects

In the implementation of the Davao City DRRMP, priority programs/projects and demonstration sites are identified. This programs/projects shall be conducted in order to create a basis for future replication to other other areas in the City exposed to different types of hazards and those who have already been categorized as high risk areas by reason of exposure and vulnerability of its population. All priority programs/projects are to be implemented within the immediate or short term period from 2013 to 2014. The priority projects of the Davao City DRRMP are:

1. Development of the following plans:

- Davao City Disaster Risk Reduction and Management Investment Fund Plan;
- Davao City DRRMP;
- Revisions of the different response plans;
- Contingency Plan per hazard;
- Risk financing

2. Reconstitution of the Davao City DRRM Council and the different Barangay Disaster Risk Reduction and Management Committees, their respective operations centers, as prescribed by RA 10121

3. Validation of the Conduct existing DRRM and CCA resources and services;

4. Hazards, risks and vulnerabilities mapping and assessments specially in the most high-risk areas in the City;

5. Development of guidelines on

- Communications and information protocol before, during and after disasters
- Standard guidelines for local flood early warning systems
- Evacuation
- Infrastructure redesign and/or modifications
- Review of the Manual of operations for disaster operations centers
- Accreditation of stakeholders including volunteer groups

6. Development of gender-based tools on

- DRRM and CCA mainstreaming in the different development plans
- DANA and Post-DANA
- Psychosocial concerns

Gender mainstreaming

Gender mainstreaming is about the recognition, acceptance, identification and addressing of the different roles, needs, capacities and vulnerabilities of men and women. The City through Davao City DRRMP is committed to promoting gender-sensitive vulnerability and capacity-analysis in all disaster risk reduction and management activities. It encourages balancing the roles, responsibilities, needs, interests, capacities of and effect on both genders of response and contingency plans as well as implementation of community-based activities. Gender mainstreaming is about reducing the vulnerabilities of men and women to disasters and encourages a balance in the participation and decision making roles of men and women in DRRM.

Environmental protection

The enactment of different environmental ordinances of the City by the Legislative body has put the City in the forefront of environmental protection. Concerns for the environment is essential component of DRR/CCA in order to minimize vulnerability and avoid increasing the risk of this communities. It also underscores the thrust of the Local Government to sustain the ecosystem of the City. Strategies and guidelines will be undertaken so that every activities in all priority areas do not create stress on the remaining natural resources.

Cultural sensitivity/indigenous practices

Davao City is being inhabited by different Indigenous Peoples. Hence, the Davao City DRRMP recognizes the importance of culturally-sensitive risk reduction measures at all levels. People's vulnerability to disasters as well as their capacities to adapt to the changing realities are more often than not related to cultural and indigenous practices. By being sensitive to the indigenous practices and local knowledge, DRRM approaches will become more effective and more easily understood and embraced by the people without any discrimination as to race, religion, culture and ethnicity.

Rights-based approach

Republic Act 10121, has on its policy on peoples rights to life and property. Since people has the right to be protected, this Davao City DRRMP will ensure that the policies being lay down will then be provided.

This policy has also been the thrust of the City Government of Davao. Priority was given because people have the right to live, safety, information, education, cultural beliefs and right to better lives as protected by the Constitution.

V. IMPLEMENTATION STRATEGIES

Strategies are identified to implement the Davao City DRRMP and achieve the desired key results under each of the four thematic areas. This results may inter-faced with each other but the ultimate aimed is to achieved the desired dream of making Davao City as the most Livable City in Asia.

Advocacy and Information, Education and Communication (IEC)

A strong commitment is required to save lives and properties threatened by natural and human-induced disasters. Achieving this will need increasing visibility and understanding of DRRM and CCA issues, enhancing and developing more partnerships, encouraging actions and gathering public support for successful implementation of the different activities. The Davao City DRRMP will use evidence-based advocacy to influence people, policies, structures and systems in order to build resilient communities by raising awareness, working with the media and key stakeholders. The Davao City DRRMC will continue to develop advocacy, IEC and various communication strategies based on risk assessments and good DRRM practices to be shared with other barangays and communities in the City.

Community-based capability building

The existence of different skilled trainers in the City will now be strengthened to provide a uniform approached and provide a venue for knowledge sharing from different pool of trainers coming from other organization and institutions in the City.

The Knowledge Management Training Institute will coordinate and becomes the venue for this activity in order to customized training programs and ensure that people are trained based on the needed skills in the different DRRM aspects with out prejudice to given culture and tradition of a certain community. Different people have different needs and capacities and developing community-based capability building programs ensures that knowledge, skills and attitudes are enhanced and built upon further.

Contingency Planning

Plans as an essential component shall be revisited to attuned to the changing times. Contingency and other response plans will now be reviewed and tested to ensure that it will provide a better view of the existing society.

Different thematic areas of the DRRM shall be given importance and aligned with the thrust of the Local Government. Past experiences of disasters shall be taken into consideration for the development and revision of all this plans. Likewise, BDRRMC's shall also be encouraged to have their plans in adherence to this plans to ensure uniformity of responses during emergencies and disaster.

Education on DRRM and CCA for all

Mainstreaming DRRM into formal education should be undertaken through the integration of DRRM and CCA concepts in the curriculum for basic education, the National Service Training Program (NSTP) at the tertiary level, and bachelors' degree programs. This also includes the conduct of DRRM and CCA training of all public sector employees as mandated by law, and the training of teachers and development of teaching materials at the primary and secondary levels.

Institutionalization of DRRMCs and LDRRMOs

Davao City Government has in 1996 created the Disaster Coordinating Division whose mandate is to ensure that all DRRM programs and projects of the City shall be implemented. However with the advent of Republic Act 10121 which requires creation of permanent local DRRM offices to attuned to the new law. It is also ensure that all DRRM-related activities, plans and programs will be implemented and sustained, especially at the local level. The Davao City DRRM Council and Barangay BDRRMC's shall also served as a tool in ensuring a continued approached in the implemmentation of the different DRRM programs in the City. Having a point of convergence is important to ensure that risk reduction measures complement one another and are institutionalized with the end in view of reducing people and institutional vulnerabilities to disasters. This will likewise promote the paradigm shift towards mainstreaming DRRM in local planning by investing risk-reduction measures from the reactive mode exemplified by activities limited to disaster response operations.

Research, Technology Development and Knowledge Management

With the changes in the climate and technological advances, regularly conducting research and technology development will contribute to more innovative and adaptive mechanisms and approaches towards DRRM and CCA. Along side new information, knowledge management through database development, documentation, recognition and replication of good practices will help achieve the objectives and targets of the RDRRMP through more efficient use of resources, learnings and experiences.

Networking and partnership building between and among stakeholders, media and tiers of government

No one can claim to have monopoly of creating a safe, adaptive and disaster resilient communities. Henceforth, participation and coordination of other sectors in the City MUST always be the premodial concern of the Davao City DRRMC. Success in the implementation of the programs/projects is highly dependent on the close collaboration and cooperation of the different stakeholders. Building effective and mutually reinforcing parterships and evolving networks ensure the multi-stakeholder and multi-sectoral participation of the different players in DRRM.

Pre-disaster Recovery Planning for Faster Post-disaster Rehabilitation and Recovery

Whenever a disaster occurs in the region, there is always great pressure to quickly reconstruct damaged infrastructures and critical other facilities. Pre-disaster recovery planning will help in a more effective

response, hasten the recovery from the impacts of a disaster, and ensure the achievement of rehabilitation and recovery outcomes. Pre-disaster recovery planning also promotes greater participation in a non-disaster environment. Within the perspective of building back better, this activity will involve creating disaster scenarios, determining the key areas of intervention, and establishing post-disaster recovery organization. Key inputs to this activity are the risk assessments as well as lessons learned from earlier disaster rehabilitation and recovery experiences.

VI. IMPLEMENTATION MECHANISMS

Implementation of the Davao City DRRMP shall take place through the integration of DRRM into the different plans of the City (Comprehensive Land-Use Plan; Comprehensive Development Plans; City's Shelter Plan; City Drainage Plan)

Statutory Responsibilities – Organizational Complement of the Davao City Disaster Risk Reduction Management Council

This plan envisions the establishment of an organization that will serve as a vehicle for reducing the risk and a coordinated response to calamities and for managing resource. Under this plan, the Davao City Disaster Risk Reduction and Management Council (DCDRMC, or the Council) shall be established and, operating through a facility to be known as the Davao City Disaster Risk Reduction and Management Operation Center (DCDRMOC –Organizational Structure), shall exercise direction and control over all disaster risk reduction and management operations.

The Local Chief Executive (LCE) shall coordinate the city government's support/ assistance activities in disaster management through the Council. On the other hand, the Council shall provide the City Mayor with a facility to manage and control over multi-department types of disaster-stabilization operations.

The Council shall have as members the following:

City Mayor	- Chairperson
Vice-Mayor	- Vice-Chairperson
Disaster Risk Reduction and Management Officer	- Member
Head, City Planning and Dev't. Office	- Member
Head, City Health Office	- Member
Head, City Agriculturist Office	- Member
Head, City Veterinarian's Office	- Member
Head, City Social Services and Dev't. Office	- Member
Head, Gender and Dev't. Office	- Member
Head, City Environment and Natural Resources	- Member
Head, City Administrator's Office	- Member
Head, City Budget Office	- Member
Head, City Information Office	- Member
Head, BCCAD	- Member
Head, Traffic Management Center	- Member
City Fire Marshall, BFP	- Member
City Schools Division Supt, DepEd	- Member
Chapter Administrator, PRC-Davao City Chapter	- Member
City Director, DCPO	- Member
Commanding Officer, TFD	- Member
Commanding Officer, EASTMINCOM	- Member
District Commander, PCG	- Member
Representative, DCCCI	- Member
Representative, Regional Community Defense Group XI	- Member

Representatives, Civil Society Organizations
President, Association of Barangay Captains
COO - CENTRAL 911
Public Safety and Security Command Center
Office of Civil Defense XI

- Member
- Member
- Member
- Member
- Member

The Davao City Disaster Risk Reduction and Management Council(DCDRRMC) has established six(6) committees, the four DRR framework exist but an additional committees were created to ensure that all aspects of the DRRM and CCA can be taken care of.

Disaster Risk Reduction and Management Office and Disaster Risk Reduction and Management Operation Center

In the day-to-day implementation of its functions, the Council has a facility known as the Disaster Risk Reduction and Management Office and the Disaster Risk Reduction and Management Operation Center (DOC). The DCDRRMO-DCDRRMOC is a facility that serves the requirements of the Council as provided for by Republic Act 10121. It serves as the nerve center for all disaster/calamity related activities and as the repository of statistical data, information and reports. It is headed by the Disaster Risk Reduction and Management Officer.

The DCDRRMO-DCDRRMOC is equipped with communications facilities to network with the Council's member-agencies in order to mitigate, prevent, mobilize, respond, and provide immediate emergency rescue assistance to victims of any given emergency situation that has a potential to develop into a disaster proportion. Thus, it operates on a 24/7 basis.

Functions under the Provisions of R.A. 10121

A. Administration and Training

1. Organize and conduct training, orientation, and, and knowledge management activities on disaster risk reduction and management at the local level.
2. Prepare and submit to the local Sangguniang Panlungsod the LDRRMO Plan and budget, proposed programming of LDRRMF, other disaster risk reduction and management resources, and other regular funding sources and budgetary support.
3. Organize, train, equip and supervise the local emergency response teams and the ACDVs, ensuring that humanitarian aid workers are equipped with basic skills to assist mothers to breastfeed.
4. Disseminate information and raise public awareness about hazards, vulnerabilities and risk, their nature, effects, early warning signs and countermeasures.
5. Develop, strengthen and operationalized mechanisms for partnership or networking with the private sector, CSOs and volunteer groups.
6. Prepare and submit, the report on the utilization of the LDRMF and other dedicated disaster risk reduction and management resources to the local Commission on Audit, copy furnished the regional director of the OCD and the Local Government Operations Officer of the DILG.

7. Coordinate other disaster risk reduction and management activities.
8. Serve as secretariat of the LDRRMC.
9. Act on other matters relative to Administrative functions.

B. Planning and Research

10. Design program, and coordinate disaster risk reduction and management activities consistent with the National Council standards.
11. Facilitate and support risk assessments and contingency planning activities.
12. Consolidate local disaster risk information which includes natural hazards, vulnerabilities, and climate change risks, and maintain local risk maps.
13. Identifies, assesses and manages hazards, vulnerabilities and risks.
14. Maintain a database of human resource, equipment, directories, and location of critical infrastructures and their capacities.
15. Take all necessary steps on a continuing basis to maintain, provide, or arrange the provision of or to otherwise make available, suitably-trained and competent personnel for effective civil defense and disaster risk reduction and management.
16. Formulate and implement a comprehensive and integrated LDRMP in accordance with the national, regional framework, and policies on disaster risk reduction in close coordination with Local Development Council.
17. Act on other matters that may be authorized.

C. Operation and Warning

18. Operate a multi-hazard early warning system, linked to disaster risk reduction provide accurate and timely advice to national and local emergency organizations.
19. Respond to and manage the adverse effects of emergencies and carry out emergencies and carry out recovery activities in the affected area, ensuring that there is an efficient mechanism for immediate delivery of food, shelter and medical supplies for women and children, endeavor to create a special place where internally displaced mothers and children can help with breastfeeding, feed and care for their babies and give support to each other.
20. Establish the Disaster Risk Reduction and Management Operation Center. Act on other matters that may be authorized.

Agency Leads and Implementing Partners

Agency leads and implementing partner organizations and/or groups are identified in the Davao City DRRMP to ensure the effective implementation of the plan.

Davao City DRRMC Lead Agencies - The overall lead or focal agency for each of the four (4) thematic areas are the different members of the Davao City DRRMC, namely:

- Lead Agency for Disaster Prevention and Mitigation: **City Planning and Development Office (CPDO)**
- Lead Agency for Disaster Preparedness: **Disaster Risk Reduction and Management Office(DRRMO)**
- Lead Agency for Disaster Response: **CENTRAL 911/CSSDO**
- Lead Agency for Rehabilitation and Recovery: **City Social Services and Development Office(CSSDO)/CEO**

Agency Leads – the following are their general duties and responsibilities:

1. Takes the lead in initiating the implementation of the activities
2. Coordinates and collaborates with the different implementing partners to ensure that the activities are operationalized.
3. Monitors the progress of the activities.
4. Evaluates the implementation development and program efficiency.
5. Consolidates reports from the implementing partners and submits to the respective lead agency of the DRRM priority areas.

Implementing Partners - the following are their general duties and responsibilities:

1. Perform the activities to achieve the specific outcomes.
2. Work with other implementing partners within the context of coordination, collaboration and partnership.
3. Submit reports to Agency Leads.

Resource Mobilization

The resources coming from the different offices within the City Government can be utilized to financed different programs and projects for the DRRM/CCA. However, the following sources can be tapped to fund the various DRRM programs and projects:

1. Annual Development Fund – specially those for enfastructure development
2. Local Disaster Risk Reduction and Management Fund (LDRRMF)
3. Priority Development Assistance Fund (PDAF)
4. Donor Funds

Monitoring and Evaluation

Feedback mechanisms are important aspects of gauging performance targets and learning from experiences on the ground. The Davao City DRRMP, being a term plan will definitely be achored on the political term of an existing LGU administration and leadership, hence, review can be done after the term of has ended to attuned to the thrust of the sitting chairperson of the council.

Monitoring and evaluation are essential components of results-based programming in DRRM as these will ensure the plan's on-time implementation and that lessons from past experiences become input to the plan altogether. Also, through monitoring and evaluation activities, appropriate and needed revisions and/or changes can be identified, from the listed activities to the implementation mechanisms, in case more appropriate ones are realized. These will be done by the Davao City DRRMO, in close coordination with the Davao City DRRMCs' Four (4) lead agencies, and will focus on relevance, effectiveness, efficiency, impact, and sustainability. A standard monitoring and evaluation template will be done by the City Planning and Development Office and the Davao City DRRMO in consultation with different stakeholders.

Monitoring and evaluation will use the indicators, targets and activities identified in each of the four thematic areas of the Davao City DRRMP. The indicators set will be applicable to both the City and barangays. Customization of the targets will depend on the risk assessments and analysis done in the different barangays and communities in the City. Different outputs and activities will be monitored by the different BDRRMC's chairperson to make sure that the activities are delivered efficiently and effectively.

This will also include an audit report on the use and utilization of the BDRRMF and how the said fund contributed to the attainment of the Plan.

Throughout all activities, ensuring *"Safer, Adaptive and Disaster-Resilient Davao City Communities toward Sustainable Development"* will be the main focus. It will be essential that this learning is captured and shared amongst the various stakeholders, leads and partners. Throughout its implementation, reporting on the progress on the Plan will be communicated through various media and partners, making sure that the learning are shared effectively. These will then feed into the RDRRMP, making it adaptive to the changing situations and needs on the ground. In the Monitoring and Evaluation activities, it will be essential to link up the learning from the Davao City DRRMP implementation with that of other related plans.

Steps for the Monitoring and Evaluation Process

Level	Step	Lead
BDRRMC's	1. Barangay DRRM Committees, together with key relevant stakeholders and partners will take the lead in the process by looking into their progress vis-a-vis their local DRRM plan's targets. A report will be submitted to the Davao City DRRMC	Davao City DRRM Office
	2. The Davao City DRRMC will prepare validation report. Once finalized, a report will be submitted to the Regional DRRM Council	Davao City DRRM Council

Level	Step	Lead
Davao City DRRMC	3. The implementing partners in each of the outcomes and/or activities identified under the Davao City DRRMP will submit a report on the progress of the implementation to the lead agency in each of the activities	Implementing Partners
	4. The Lead Agency will consolidate the reports and submit to the Davao City DRRMC	Lead Agency
	5. The Davao City DRRMC will evaluate and if validated submits report to the Regional DRRMC through the OCD.	Region XI DRRM Council

Other Monitoring Tool

In line with the City's adherence to goals sets by other government agencies, other monitoring tools shall be adopted to ensure that the implementation of the plan can be captured and the same will be used to monitor the progress especially on different DRRM programs and projects.

On the otherhand, different stakeholders in the City, the Civil Society Organizations shall also be given the oppurtunity to be inform on the progress as well as the challenges meet in the implementation of the Plan.

Amendment Clause

This plan must be reviewed and amended every three (3) years to conform with the term of office of the elected local government unit officials. However, any amendments can be undertaken as the need arises and in the event of any changes as a result of a disaster which requires immediate revision of this plan.

DAVAO CITY HAZARD AND RISK PROFILE

LIST OF RISK AREAS IN DAVAO CITY

I. FLOOD RISK AREAS:

1ST CONGRESSIONAL DISTRICT

A. CITY POBLACION DISTRICT

- **Barangay 1-A (Bolton Dike)**
 - * Purok 1
 - * Purok 2
 - * Purok 3
 - * Purok 5
 - * Purok 6
 - * Purok 7
- **Barangay 2-A (Magallanes Dike)**
 - * Purok 1
 - * Purok 2
 - * Purok 3
 - * Purok 7
- **Barangay 5-A Bankerohan Riverside**
 - * Purok 2
 - * Purok 3
 - * Purok 4
 - * Purok 6
 - * Purok 7
 - * Purok 11
 - * Purok 17
- **Barangay 7-A General Malvar**
 - * Purok 1
 - * Purok 2
- **Barangay 8-A**
 - * Lower Madapo, Purok 10
- **Barangay 9-A**
 - * San Rafael Village, Purok 10
 - * Muslim Village
 - * Marfori 2, Purok 8
 - * Pag-asa Drive, Purok 4
 - * Barrio Tubigon, Purok 6
- **Barangay 10-A**

- * DIHO II Subdivision, Purok 10
- * Platinum, Riverside

• **Barangay 19--B**

- * Cell 1
- * Cell 2
- * Muslim Area, Purok 8

- * Phase 1, El Rio
- * Phase 2, El Rio
- * Phase 3, El Rio

• **Barangay 40--D**

- * Purok 1 (near Bolton Bridge)

B. TALOMO DISTRICT

• **Barangay Bucana 76--A**

- * DAPSA, Purok 12
- * St. John, Purok 12-A
- * Pasil, Purok 12-B
- * KASILAK, Purok 13
- * Manggahan, Purok 20

- * BILUSA, Purok 19
- * S.I.R. Phase I
- * S.I.R. Phase II
- * Agro Compound, Purok 32
- * Manggahan, Purok 21

• **Barangay Ma-a**

- * Gravahan, Purok 3
- * Gravahan, Purok
- * Purok 13 (near Bachelor Bus Garage)
- * Purok 13-A (near Yellow Bus Terminal)
