

Towards a country-independent data format: the Akoma Ntoso experience

ABSTRACT & SPECIFICATIONS

Akoma Ntoso defines a set of simple, technology-neutral electronic representations in XML format of parliamentary, legislative, and judiciary documents. The initiative was developed within the Strengthening Information Systems in African Parliaments program by the United Nations Department of Economic and Social Affairs (UN/DESA).

STRUCTURAL RELEVANCE TO STATUTORY PARSING:

This paper describes the conceptual model, hierarchical structures, and country-independent schema applied to parse complex statutory ancestry, amendment trails, and normative provisions. The hierarchical parsing conventions (enactment level, chapter, section, operative clause) parallel the structural prepending protocol utilized in Chapter 3 to maintain jurisdictional provenance and clause hierarchy across Philippine statutes and Davao City local ordinances.
